

Quantitative Measure for the “Nakedness” of Fluoride Ion Sources [J. Am. Chem. Soc. 2003, 125, 9457–9461]. Karl O. Christe* and H. Donald Brooke Jenkins

Page 9460, Table 1 and Figure 1. The (constant) entropy terms $S(A, g)$, A = SbF_5 , BF_3 , PF_5 , and AsF_5 , were incorrectly taken as those corresponding to the gaseous element A rather than the fluoride. Correct values are (in $\text{J K}^{-1} \text{ mol}^{-1}$): 354.3 (SbF_5), 254.1, (BF_3), 285.7 (PF_5), and 340.0 (AsF_5).¹ The revised values of ΔG (which should replace those in Table 1 and plotted in Figure 1) are given in the table below.

cation C^+	$\Delta G/\text{kJ mol}^{-1}$ (A = SbF_5)	$\Delta G/\text{kJ mol}^{-1}$ (A = BF_3)	$\Delta G/\text{kJ mol}^{-1}$ (A = PF_5)	$\Delta G/\text{kJ mol}^{-1}$ (A = AsF_5)
Cs	-227	-150	-150	-179
TMA	-371	-255	-287	-317
MU	-392	-269	-307	-337
HMG	-397	-272	-311	-341
HMP	-408	-278	-321	-350
TMAA	-413	-281	-325	-355
HDMAP	-423	-287	-335	-365
$V(\text{C}^+) = 1.3 \text{ nm}^3$	-435	-293	-345	-376

The entry $[\Delta H - \text{FIA} + 3/2RT] = 240$ for Cs (A = SbF_5) in Table 1 should be 214 kJ mol^{-1} , with all other values remaining the same.

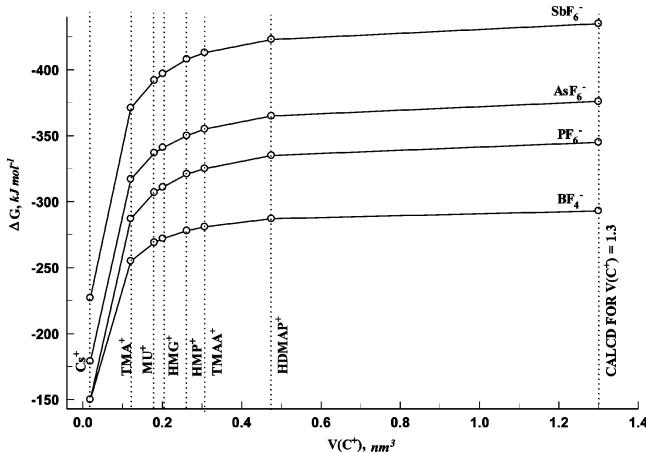

Figure 1. Revised Figure 1.

None of the conclusions made in this paper are affected in any way by this correction, the quantitative measure of “nakedness” being invested in the enthalpy and not the entropy dependent terms.

We are grateful to Professor Zoran Mazej of Jožef Stefan Institute, Ljubljana, for bringing this error to our attention.
