

## News of People and Products

EMERY INDUSTRIES INC., Cincinnati, O., whose Sanitone process provides dry cleaners throughout the country with engineering and merchandising service, has announced four appointments: Porter J. Richards, eastern sales manager; George S. Funk, southern; E. L. Montgomery, Pacific Coast; and Robert B. Orthwein, Middle West.

New uses for many essential oils, new replacement oils, and advanced techniques were discussed at the recent sales conference of MAGNUS, MABEE AND REYNARD INC., New York City. The company has just concluded its 50th year.

VICTOR CHEMICAL WORKS, Chicago, is acquiring tidewater property in western Florida near rich phosphate rock fields, and construction of an electrically controlled and operated furnace plant will be started soon.

"Soap, one of chemistry's earliest contributions to better living, is facing real competition," reports the INDUSTRIAL BULLETIN of the Arthur D. Little inc. organization in the December issue. "The synthetic detergents, first introduced to meet special industrial problems which could not be met by soap, have recently been produced in great volume. Their costs have been reduced by virtue both of large-volume operations and because of new production develop-

ments. As a result, the synthetic detergents are being merchandised on a large scale to the householder for cleaning jobs where soap is not at its best, especially in hard water areas."

ELMER H. BOBST, pioneer in the development of interest in hormones and vitamins in the medical and food fields, has been made president of William R. Warner and Company inc., New York City. He is former president of Hoffman-La Roche inc. Immediate objectives will be to widen the scope of the Warner Institute for research in developing new remedies in advanced pathology and improving existing ones and to set up a program for the pooling of pharmaceutical research by several firms in the United States and abroad.

Oscar M. Burke, president of the MANHATTAN SOAP COMPANY, New York City, has been named chairman of the soap and cleansers division of the National Service Fund, Disabled American Veterans.

Patent No. 2,342,786 is one of the many patents on the manufacture of soap, detergents, and cleaning

Woman operator making simple adjustments on the New Sperry EHC

The New Sperry EHC Closing Device requires only simple adjustment at two points. So easily operated that a girl can do the work that with a manual closing device required up to three men.

This completely enclosed, electric-hydraulic unit provides positive, precise, yet simple press actuation, moving the head in both directions.

It fits any make press with

**CHEMIST WANTED**

WANTED: Chemist experienced in production and control of sulphonated oils. Basic knowledge of leather tanning and dyeing preferable but not essential. Excellent opportunity with old established company. Salary commensurate with qualifications. Reply in detail. Address Box 51, Oil & Soap.

DEODOR-SCENTS are a copyrighted MM&R exclusive . . . exclusively formulated to cover the odors of ingredients used in fly sprays and other technical products.

To meet varied needs, MM&R Deodor-Scents are made in two types—

Type A—To Neutralize and Perfume

Type B—To Neutralize Without Perfuming

With MM&R Deodor-Scents, every trace of undesirable odor is removed positively and permanently, and at a cost so low you'll marvel at their extraordinary efficiency.

If possible, send us your unperfumed product, and we will return "Deodor-Scented" samples. Deodor-Scents for testing on request.
