

It's expensive to make your own emulsifier

The mono-diglyceride emulsifier you make yourself is only a mixture. You have to go to the time and expense of assaying it for monoglyceride content. Then, since you have to add it before deodorization, you lose varying amounts in the process. Sometimes you wind up with more than you need, sometimes with too little.

Not so with *Myverol*[®] *Distilled Monoglycerides*. You can add them after deodorization and know exactly how much monoglyceride is in your finished product. The reason you can add them after deodorization is that the distillation has removed whatever might affect the taste, odor, or color of your product. *Myverol Distilled Monoglycerides* are available in several forms made from most common food fats. To find out more about *Myverol* economics, write *Distillation Products Industries*, Rochester 3, N. Y. Sales offices: New York, Chicago, and Memphis • W. M. Gillies and Company, Los Angeles, Portland, and San Francisco • Charles Albert Smith Limited, Montreal and Toronto.

**distillers of monoglycerides
made from natural fats and oils**

Also . . . vitamin A in bulk
for foods and pharmaceuticals

Distillation Products Industries
is a division of **Eastman Kodak Company**

People and Products

The Votator Division of GIRDLER COMPANY, Louisville, Ky., has designed a sanitary triplex pump to be used where corrosive slurries of viscosities as high as 40,000 centipoises are handled at medium pressures. The materials of construction and the drive may be specified by the customer.

Officers of the SOCIETY OF COSMETIC CHEMISTS for 1957 are Warren B. Dennis, chairman; Harry Isacoff, chairman-elect; Vincent DeFeo, treasurer; and Maria V. Wiener, secretary.
