

Adds Three Papers to Program

IN ADDITION to the "complete" program of 55 technical papers announced in the September issue of the Journal of the American Oil Chemists' Society, there will actually be three more according to the chairman, W. C. Ault, who is with the Eastern Regional Research Laboratory in Philadelphia. Titles for these are:

Polymerizable Derivatives of Long-Chain Fatty Alcohols. III. Copolymers of Some Alkyl Acrylates and Acrylonitrile, by E. F. Jordan Jr., W. E. Palm, and W. S. Port, Eastern Regional Research Laboratory, Philadelphia, Pa.

The Acetolysis of Glycerides. I and II, by Edwin M. Meade, Meade Laboratory and Process Company, Unionville, Ont., Canada, and Dilys Walder Manion, Canada Packers Ltd., Toronto, Ont., Canada

In general, the papers to be presented at the 34th fall meeting of the Society at the Hotel New Yorker, on October 17-19, 1960, will range from applications of newer methodology to problems in fat research, detergents, chemical derivatives of fats, fat processing, special edible fats, and biochemistry of fats, including nutritional aspects, to industrial markets for fat and oil derivatives. Essentially all of the papers will describe original research.

Exhibit space is in charge of Henry G. Salomon of L. A. Salomon and Bro., New York. Hotel chairman F. B. White of the Foster Wheeler Corporation, assisted by J. J. Geminder of Chas. Pfizer and Company, urges immediate reservations direct with the New Yorker.

General entertainment will include the Sunday mixer, a cocktail party Monday given by Distillation Products Industries, and the dinner dance Tuesday. The ladies, with Mrs. E. A. Lawrence of Port Washington, N. Y., as chairman, will tour the United Nations building and have luncheon in the Delegate's Lounge. Tuesday they will have a breakfast-fashion show at Altman's and take a boat trip around Manhattan Island. Wednesday is left open for small group trips with hostess guides.

An attendance of 800 is expected by the co-chairmen, D. S. Bolley of the Baker Castor Oil Company, Bayonne, N. J., and Mr. Lawrence of the Colgate-Palmolive Company, Jersey City, N. J. Various committees will meet during the convention, also the Governing Board with R. W. Bates presiding.

• *35 Years Ago*

The Journal of Oil and Fat Industries as a quarterly ceased to exist with the October issue, according to an announcement in the October 1925 issue of the Journal, and becomes a monthly magazine with Miller Freeman of New York, San Francisco, and Seattle, as publisher: "to Messrs. Cluff and Morrison the Society is indebted for this arrangement, which will give the members a monthly magazine, without any of the responsibility for its financing."

The editor adds in a "Bon Voyage" note that "it may be a bit harder to fill a monthly with all high-grade articles by men such as C. A. Browne, George S. Jamieson, Arthur Holmes, Glen Pickard, Dr. Wesson, and others who have been our contributors in the past, but it can be done if the whole Society is heartily behind their official organ."

The new Zoom 70 Stereoscope is announced by Bausch and Lomb Inc., Rochester, N.Y., as the first instrument of its type to incorporate zoom magnification in a stereoscope for photo interpretation.

Johnson's Wax has established a subsidiary in Switzerland, known as Johnson's Wax Fabrik A.G., Weiningen, a suburb of Zurich.

Soap Papers Invited

IN PREPARATION for the May 1961 meeting of the American Oil Chemists' Society in St. Louis soap and detergent papers are solicited on manufacturing techniques, synthesis, and surface chemistry and measurements by J. C. Harris, Monsanto Chemical Company, Dayton, O., chairman of the soap and detergent area program. Assisting him are L. O. Leenerts, Purex Corporation, South Gate, Calif., and A. J. Stirton, Eastern Regional Research Laboratory, Philadelphia, Pa.

The presentations should cover original work and should be free of the advertising or promotional approach. They should not be based on secret or restricted information which might require a very general treatment that would impair their value.

This announcement is presented very early to permit adequate time for preparation and completion of in-process research and to form the basis of an integrated program of activities in this area. A later notice will indicate abstract and paper deadlines, giving further detail.
