

• *New Products*

BARBER-COLMAN COMPANY, Rockford, Ill., has information available on the following:

1. Automatic Cool Down Controller for chromatography applications, to be used with their 5000 Series Gas Chromatograph. It minimizes the time ordinarily required to return the column to its initial starting temperature.

2. A new Liquid Chromatography Detection System using a hydrogen flame detector to provide rapid, simple response and increased sensitivity; a solvent evaporation chamber eliminates the eluting solvent.

3. A new Segmented Recorder which logs multizone process variables. Measurement can be obtained from any device where the measured variable can be resolved into an electrical signal.

HOFFMANN-LAROCHE INC., Nutley, N.J., has offered the first new food color in 10 years, apo-carotenal, in water-dispersible form. The 10% dry beadlets are a companion product to Beta Carotene, it is purplish black in color with vitamin A activity of 120,000 units per gram.

APPLIED SCIENCE LABORATORIES, INC., State College, Pa., has just released the Radin-Pelick TLC Sample Streaker. This device permits the application of uniform bands of a sample solution to regular size or thin-layer chromatographic plates.

PERKIN-ELMER, Norwalk, Conn., has designed a compact digital electronic readout, the DCR-2, to be used with the Hitachi Perkin-Elmer Model 139 and other ultraviolet/visible spectrophotometers for rapid and convenient readout of 4-digit values.
