Expect Sellout for Fall Exhibits

A report of the Philadelphia local committee during the first week of June indicates that a sellout is expected. Of the 48 booths listed in the brochure, 42 were sold at this time, with a total of 35 exhibitors, including one equipment company from Italy.

Nearly half of the exhibitors will be in the process equipment field, covering refining, bleaching, filtration and odorization of fats and oils. Several booths will feature additives such as antioxidants, colorings and vitamins.

The popular and growing field of instrumentation will be well represented with a wide variety of companies in this area. Among the instrument company displays will be found equipment for process control, quality control, and also for basic and advanced research.

A complete listing of exhibitors and a description of their displays will be published in the program to be issued at the meeting.
