

**ANNOUNCEMENT  
1972-1973  
SMALLEY CHECK SAMPLE PROGRAM**

The Smalley Committee annually offers a number of Check Sample Series in various analytical categories. Interested analysts should write to Smalley Committee, AOCS, 508 S. Sixth St., Champaign, Illinois 61820, prior to July 15, 1972 for order forms and complete information, which will be distributed before each series begins.

The following Check Sample Series (the number of samples being shown in parenthesis) are offered:

Cottonseed (10)	Oilseed Meals (15)	Cottonseed Oil (4)
Soybeans (10)	Edible Fats (5)	Soybean Oil (4)
Peanuts (7)	Drying Oils (6)	Copra (4)
Safflower Seed (7)	Tallow & Grease (5)	N.I.O.P. Fats & Oils (5)
Gas Chromatography (fatty acid composition) (6)		
Cellulose Yield (cotton linters) (10)		

Additional series will be offered should sufficient interest be indicated. Please advise the Smalley Committee of series you feel would be of value.

R.T. Doughtie, Jr., Chairman  
Smalley Committee

# WILEY-INTERSCIENCE

*Up-dated and expanded, the new **Second Edition** of a well-known work—*  
**SYSTEMATIC ANALYSIS OF SURFACE-ACTIVE AGENTS**  
**Second Edition**

By **Milton J. Rosen**, Brooklyn College and **Henry A. Goldsmith**,  
Turco Products Division of Purex Corporation, Ltd.

Volume 12 in Chemical Analysis: A Series of Monographs on Analytical Chemistry  
and Its Applications, edited by P. J. Elving and I. M. Kolthoff

Up-dated to include the important literature through 1971, the new Second Edition of a pioneer work in the field now includes a wealth of new and previously unpublished material on such techniques as infrared spectroscopy, nuclear magnetic resonance spectroscopy, mass spectrometry, and chromatographic methods of all types—column, thin layer, paper, and gas chromatography. The methods discussed

and the depth of treatment allow the reader to use *Systematic Analysis of Surface-Active Agents* right in the laboratory, as well as in the library as a major reference to the subject. In addition, the appendix now features a table of representative commercially-available surface-active agents, classed by structural type.
