

## VOTATOR Continuous Vacuum Bleaching System

For the continuous bleaching of edible fats and oils • Excellent color reduction and soap removal • Low clay dosage. Low oil retention • Effective deaeration and dehydration. Effective oil-clay contact • Efficient utility usage. Minimum operator attention • Automatic control of process variables.

## Four receive Bond Award

The AOCS Bond Award Committee has announced that John W. Scott, presenting author, has won the Bond Award Gold Medal, and Winifred M. Cort, coauthor, has won the first place certificate for their paper, "6-Hydroxychroman-2-Carboxylic Acids—Novel Antioxidants."

Scott is a research group chief and Cort is a group leader in product development for Hoffman-LaRoche, Inc., Nutley, N.J.

Joseph J. Rackis, principal chemist, Oilseed Crops Laboratory, Northern Regional Research Laboratory, ARS, USDA, Peoria, Ill., received the second place certificate for his paper, "Processing Soybeans into Foods: Nutritional and Flavor Aspects."

Benjamin F. Ward, Jr., product development manager, Tall Oil Department, Westvaco Corp., North Charleston, S.C., received the third place certificate for his paper, "Industrial Utilization of the Unique Properties of a C<sub>21</sub> Dicarboxylic Acid."

All papers were presented at the 65th Annual Spring Meeting in Mexico City. ■

## Four receive Honored Student Awards at Fall Meeting

Four graduate students received Honored Student Awards at the AOCS 48th Annual Fall Meeting in Philadelphia.

The Honored Student Award Program, established in 1963 under the direction of the Education Committee, recognizes outstanding preparation for a career in the field of fats and oils by providing selected students an opportunity to participate in the Society's national meetings.

Those companies which have contributed to the Honored Student Award Program for 1974-75 include: G.A. Wintzer & Son Co., Wapakoneta, Ohio; International Chemical Corp., New York, N.Y.; Lauhoff Grain Co., Danville, Ill.; NL Industries, Inc., Hightstown, N.J.; Fatty Acid Producers Council, New York, N.Y.; and Kraftco Research and Development, Glenview, Ill.

The four students honored at the Philadelphia meeting were:

*Carlos George-Nascimento* is a graduate student in the Department of Biochemistry of Baylor College of Medicine. He is conducting research on the effect of different lipid compositions upon the enzymatic oxidase activity of intestinal bacteria. He completed his undergraduate studies at the Faculty of Science of the University of Chile in 1971 and will be a candidate for the Ph.D. degree from Baylor in early 1975. He is undertaking his research under the direction of professor S.J. Wakil. ■

*Patrick O'Doherty*, graduate student in biochemistry at the University of Toronto, is conducting research on the control of synthesis of fats and their release in the intestinal mucosa of the rat. He earned a B.S. with honors from the University College, Dublin in 1967, his masters in 1970 from Memorial University of Newfoundland and is a candidate for the Ph.D. degree in late 1974. He is conducting his research under the supervision of professor A. Kuksis.

*Yuri Wedmid*, graduate student in biochemistry at Rutgers University, received his B.S. from Rutgers in 1969 and attended the University of Arizona briefly thereafter. He will be a candidate for the Ph.D. from Rutgers early in 1975. His research, conducted under the supervision of professor Carter Litchfield, is on the structural chemistry of the unusual fatty substances present in the acoustic organ of the dolphin.

*Eliot C. Williams* is a graduate student at the Chemistry Department of Indiana University. He was a graduate of the University of Wisconsin in 1969 and will be a candidate for the Ph.D. degree in late 1974 at Indiana University. His research, conducted under professor E.H. Cordes, is on carbon-13 NMR studies in micellar and membrane systems aimed at understanding interactions between lipids and proteins in biologically active membranes. ■
