# The Newport Analyser

for measuring oil, fat and moisture—  
a technique pioneered by Newport-Oxford  
and accepted worldwide.

## Now we're introducing the new Mk III

Our new Mk III Newport Analyser is still the same unique, versatile instrument used by analysts in many industries throughout the world—but we've completely re-styled it into a more compact unit and re-engineered it to provide substantial benefits in simplicity of operation... yet, just as important, we've held the cost down.

Gone is the necessity to re-tune the instrument when changing samples and the number of operating controls has been more than halved. Furthermore the temperature coefficient is greatly improved.

Add these points to the fact that the Mk III can be operated by unskilled staff, requires virtually no sample preparation, is non-destructive and provides an accurate digital readout of the measured value within seconds, and you can see the Mk III is a force to be reckoned with.

So if your measurement problem is any one of the following, you should contact

Newport-Oxford right away for complete Mk III Analyser details.

### Typical Applications

- Total oil measurements in oil-bearing seeds (commercial) and plant breeding purposes.
- Measurement of total fat content in confectionery products.
- Solid/liquid ratio measurements in fat blends.
- Plasticiser in Polyvinyl chloride (PVC) and other polymer compounds.
- Total finish on synthetic fibre.
- Moisture in explosives, oil in blasting agent etc.
- Moisture in cereal products.
- Oil in wax.
- Moisture in freeze-dried products.

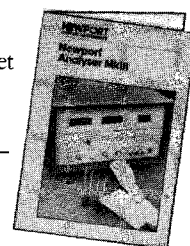

Please complete and return this coupon to obtain your new Mk III leaflet by return.
