

Vegetable protein conference registration begins

Registration forms for the World Conference on Vegetable Protein have been received and processed. The conference will be held Oct. 29 - Nov. 1, 1978, at the RAI Center, Amsterdam. Registration is being handled by the Comité Eetbaar Plantaardig Eiwit (CEPE) in the Netherlands.

Over 1,000 persons are expected to attend the conference, which is being held to present in lectures and seminars the current information on vegetable protein for nutritional and food uses.

Information is available from the CEPE Secretariat, and from the American Oil Chemists' Association, Sixth St. Champagne, Ill. 61820. Organizations, together with the names of their representatives, are the principal contributors. More than four dozen foreign groups are participating to organize the meeting.

Local arrangements in Amsterdam and group travel arrangements are being coordinated by the American Oil Chemists' Association, 1111 N. Dearborn St., Chicago, Ill. Information on registration is available from the CEPE Secretariat, provided with registration forms.

Registration forms reviewed by conference organizers and Cochairman Dr. Karl F. O'Keefe, University of Illinois, will be held during the morning session of the conference, followed by an extended session. Results will be available after the conference for informal and formal sessions. Speakers and attendees will be invited to attend the conference.

Vegetable proteins are protein nutrients. Sources of vegetable protein are soybeans, peas, lupines, and other legumes. Soybeans are the most important source of vegetable protein. Soybeans are used in a wide variety of products, including soybean meal, soybean oil, and soybean lecithin. Soybean meal is used as a feed ingredient for livestock. Soybean oil is used for cooking and as a source of vegetable oil. Soybean lecithin is used as an emulsifier in food products. Other vegetable proteins include pea protein, lupine protein, and other legume proteins. These proteins are used in a variety of food products, including soybean curries, soybean milk, and soybean flour.

Vegetable proteins are available in a variety of forms. They can be used as whole proteins, as protein concentrates, or as protein isolates. Soybean protein concentrate is a common form of vegetable protein. It is used in a variety of food products, including soybean curries, soybean milk, and soybean flour. Soybean protein isolate is a more refined form of vegetable protein. It is used in a variety of food products, including soybean curries, soybean milk, and soybean flour. Other vegetable proteins are also available in a variety of forms, including pea protein concentrate, lupine protein concentrate, and other legume protein concentrates.

The conference will be held at the RAI Center, Amsterdam, on Oct. 29, with registration beginning at 9 a.m. The exhibit area will be open from 10 a.m. to 6 p.m. The conference will include a Morning Session, a Lunch Session, and an Evening Session. The Evening Session will include a Musical Performance, a Dinner, and a Dutch Evening. The conference is expected to be a successful one, and it is hoped that it will provide a valuable opportunity for the exchange of information on vegetable protein.
