

New Products

CHROMATOGRAPHY COLUMNS

LDC/Milton Roy now sells ion chromatography columns for use with the firm's Series III Ion Chromatography System. The columns are intended for single column application. They are packed with a macroporous polymer material compatible with a wide variety of ion chromatography buffers. Information: LDC/Milton Roy, PO Box 10235, Riviera Beach, FL 33404.

SOFTWARE FOR TESTING LABS

Radian Corporation's SAM (Sample Analysis Management System) software package for IBM PC-AT and PC-XT is designed to provide managers of chemical and materials testing laboratories with a program for controlling and handling information. The package monitors workloads, revenue, sample testing schedules, produces labels and does other activities. Information: Radian Corporation, PO Box 9948, Austin, TX.

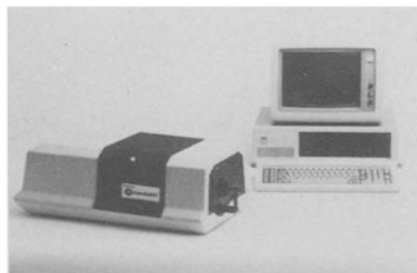

VENTING HOSE

Dayco's Pliaduct hose is designed for use as a chemical venting hose. The all-plastic hose has no wire or metal reinforcements. Service temperature range is -10 F to 150 F. Informa-

tion: Dayco Corp., 333 W. 1st St., Dayton, OH 45402.

VISCOMETER SYSTEM

Haake Buchler has announced its new Rotovisco RV100/CV100 viscometer system for product characterization. The system can process data linked to viscosity, yield point, thixotropy, structure regeneration and elasticity. Information: Haake Buchler Instrument Inc., PO Box 549, Saddle Brook, NJ 07662.

COLOR MEASUREMENT

HunterLab says its new color measurement system, ColorQuest, permits measurement for both reflectance and transmittance. An IBM-PC is used for single processing and color data display. The solid state

sensor includes a concave, holographically-lined diffraction grating with a 32 segment diode array detector that allows measurement from 400 to 710 nm at 10 nm intervals. Information: HunterLab, 11495 Sunset Hills Rd., Reston, VA 22090.

INLINE VISCOMETER

The Nametre HPHT probe now can be mounted in pipelines as small as 0.75" internal diameter to provide continuous display of process fluid viscosity. The firm says the new probe is especially suited for research and pilot plant operations where mounting in a larger pipeline is not practical. Information: Nametre Co., 101 Forrest St., Metuchen, NJ 08840.

REMOTE FLOWMETER

Hedland Products is offering a 0.75" remote readout flowmeter to monitor in-line liquids. The device is available in 12 new flow ranges, from 0.10-2.0 GPM to 2.0-30 GPM. The system may be used for installations where individual flow lines are inaccessible or too inconvenient for direct reading flowmeters. Information: Hedland Products, 220 South St., Racine, WI 53404.

Polyunsaturated Fatty Acids

A monograph edited by Wolf-H. Kunau and Ralph T. Holman, 258 p. Hardbound—\$20 for AOCS members and students, \$30 for nonmembers.

This monograph records the contributions of twenty noted researchers who contributed to the 1975 AOCS symposium on unsaturated fatty acids. The symposium was premised on the increasing need to combine separate disciplines in lipid research. Speakers thus were invited who specialized in chemical, physical and biochemical properties of lipids. Topics included biosynthesis, oxidation and regulation of metabolism, analysis, chemistry/physicochemistry, and experimental and clinical data. Illustrations and references enhance this collection.
