

Introducing ORGANOMETALLICS

The New Journal You've Been Hearing About

Edited by Dietmar Seyferth
Published by the American Chemical Society

ORGANOMETALLICS is the new journal for organic chemists, inorganic chemists, polymer chemists—all scientists needing the most current research worldwide in the highly active field of organometallic chemistry.

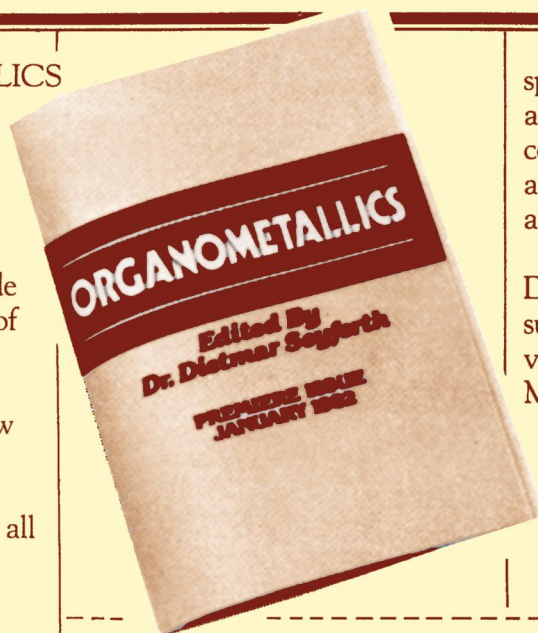

Monthly issues of this new journal will bring you articles, communications, and occasional reviews in all aspects of organometallic chemistry. Specifically, ORGANOMETALLICS covers—

Synthesis

Structure and Bonding—experimental and theoretical studies

Chemical Reactivity and Reaction Mechanisms—of the metal-carbon bond as well as of other inorganic and organic functionality present in the molecule

Applications—organometallic reagents in organic synthesis and in polymer synthesis; catalytic processes in which an organometallic compound is the catalyst or in which organometallic

species are intermediates; and applications of organometallic compounds in the synthetic aspects of materials science and solid state chemistry

Don't delay—make sure your subscription starts with the very first issue of ORGANOMETALLICS! Use the coupon below.

Journal subscriptions start January 1982.

Subscriptions at ACS member rates are for personal use only.

Foreign payment must be made in U.S. currency, by international money order, UNESCO coupons, U.S. bank draft, or order through your subscription agency.

RSC Publications News

ANNUAL REPORTS

Annual Reports on the Progress of Chemistry Vol. 77

Annual Reports provides for the general reader critical coverage of the significant advances in the major areas of chemistry on an annual basis. From 1980, Section A became devoted solely to inorganic chemistry and therefore exhibits enhanced coverage of this area compared with previous years. Section C, a new **Annual Reports** volume on physical chemistry has been introduced which consists of authoritative critical accounts of progress in major areas of chemistry by acknowledged experts. Section B covers organic chemistry.

Vol. 77 1980 (to be published in Autumn 1981)
Section A Inorganic Chemistry £36.50 (\$90.50)
RSC Members £11.50
Section B Organic Chemistry £40.50 (\$100.00)
RSC Members £12.75
Section C Physical Chemistry £36.50 (\$90.50)
RSC Members £10.00

SPECIALIST PERIODICAL REPORTS

Terpenoids and Steroids Vol. 10

Senior Reporter: J. R. Hanson

This tenth volume in a highly successful series covers the literature published between September 1978 and August 1979.

Brief Contents:

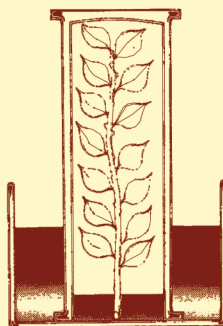

Part I: Terpenoids; Sesquiterpenoids; Diterpenoids; Triterpenoids; Carotenoids and Polyterpenoids; Part II: Steroids; Physical Methods; Steroid Reactions and Partial Synthesis. "This book is, as usual, well written and profusely illustrated".—*Alton Ochsner Medical Foundation, reviewing Vol. 8*

Hardcover 295pp 0 85186 336 1 Price £45.00 (\$115.00)
RSC Members £25.00

SPECIAL PUBLICATIONS

Oxygen and Life

Second BOC Priestley Conference

No. 39 in the Royal Society of Chemistry's series of Special Publications, this book is based on lectures with the general theme of 'Oxygen and Life', delivered at the Second Priestley Conference. The conference was sponsored by the BOC Gases Division Trust and organised by The Royal Society of Chemistry in conjunction with the University of Birmingham, September 15-18th 1980. The second BOC Priestley Conference encompassed biochemical and biological properties of oxygen and several exciting new developments were disclosed which are described in the papers contained in this volume. This book contains 17 papers on 'Oxygen and Life' which reflect new developments in the field contributed by 23 eminent scientists.

Contents:

Priestley Lecture: Mars, Biogenesis, and the Role of Oxygen; Oxygen and Life: An Introduction; The Photo-activation of Oxygen and the Evolution of O₂; Manganese Porphyrins as Sensitisers for Photo-oxidation of Water to Oxygen; A Comment on the Hypothesis that Oxygen Toxicity is Mediated by Superoxide; The Exploitation of Molecular Oxygen by Human Neutrophils: Spin-trapping of Radicals Produced During the Respiratory Burst; Oxygen as a Weapon: How Neutrophils Use Oxygen to Kill Bacteria; Manganese (II) Phosphine Complexes: Analogues of Dioxygen Transport and Storage Proteins; Perfluorochemicals as Oxygen Transport Agents in Partial and Total Blood Replacement; Development of Fluosol-DA and its Perspective as a Blood; Hemocyanin, Transporter of Oxygen in the Blue Blood Substitute; Dopamine β-Monooxygenase; Models for Functional Intermediates in the Reaction of Cytochrome c Oxidase with Oxygen; The Role of Copper and Iron in the Reduction of Oxygen by Biological Systems; The Mechanism of the Reaction of Fully Reduced Cytochrome Oxidase with Oxygen at Low Temperatures; From Oxygenase to Superoxygenase; Address Preceding the Toast to Joseph Priestley at the Priestley Dinner on 17th September 1980.

Softcover 236pp 0 85186 825 8 Price £11.00 (\$27.00)
RSC Members £7.00

RSC Members should send their orders to:
The Membership Officer, The Royal Society of Chemistry,
30, Russell Square, London WC1B 5DT.

All other orders should be sent to:
The Royal Society of Chemistry, Distribution Centre,
Blackhorse Road, Letchworth, Herts SG6 1HN.
