# Common Fragrance and Flavor Materials

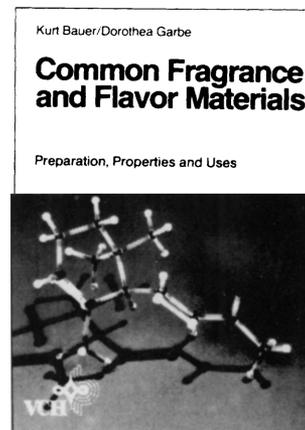

Preparation, Properties and Uses

by **K. Bauer** and **D. Garbe**

1985. VIII, 213 pages and 330 formulas.

Hardcover DM 112.-/£38.00

ISBN 3-527-26038-2

Fragrance and flavor materials are used in the manufacture of a wide variety of products. Soaps, cosmetics, toiletries, detergents, alcoholic and non-alcoholic beverages, ice-cream, confectioneries, baked goods, convenience foods, tobacco products, and pharmaceutical preparations are the best known examples.

This book presents a survey of those natural and synthetic fragrance and flavor materials which are important because of their organoleptic properties or which are produced commercially on a large scale. Information is furnished about the properties, the areas of application, and the methods employed in the manufacture of these materials.

A formula index, including CAS registry numbers, and alphabetically ordered indexes of single fragrance and flavor compounds, essential oils, and animal secretions provide easy access to the desired information.
