

ORGANIC REACTIONS MECHANISMS GROUP

Following the annual general meeting of the Organic Reactions Mechanisms Group (ORMG) of The Royal Society of Chemistry on 5th January 1988, membership of the ORMG will be open to non-members of the RSC from 1989. This initiative by the ORMG is intended to widen its membership to all those interested in its subject area: experimental and theoretical investigations into mechanisms of reactions and reactivity of organic compounds including reactive intermediates and biologically important molecules. For further details and information during 1988, please contact the secretary/treasurer of the ORMG: **Dr. H. Maskill, Department of Chemistry, University of Stirling, Stirling FK9 4LA, Scotland.**

JOURNAL OF THE CHEMICAL SOCIETY

Perkin Transactions II

Physical Organic Chemistry

CONTENTS

- 1643 Dehydroacetylation and acetate transesterification in the reactions of *erythro*- and *threo*-methyl 3-(substituted acetoxy)-2-halogeno-3-phenylpropanoates with triethylamine **Raul O. Garay** and **Mercedes C. Cabaleiro**
- 1649 Anomalous broadening of the hydroxy stretching band of some intramolecular OH... π bridged alcohols in halogenated solvents **Tom Visser** and **John H. van der Maas**
- 1653 Kinetic and theoretical considerations in the hydrolysis of iminocarbonates **Jehoshua Katzhendler**, **Amiram Goldblum**, and **Israel Ringel**
- 1661 Bio-organic applications of mass spectrometry. Part 6. Selective deprotection of nucleotides by fast atom bombardment mass spectrometry **Angelo Liguori**, **Giovanni Sindona**, and **Nicola Uccella**
- 1667 Decomposition of the Wiener topological index. Application to drug-receptor interactions **István Lukovits**
- 1673 Conformational analysis of 9-deoxydaunorubicin in solution. The application of a quantitative transient ^1H nuclear Overhauser effect **Enzo Ragg**, **Rosanna Mondelli**, and **Sergio Penco**
- 1679 Aggregation of dodecyldimethylamine *N*-oxide perchlorate in benzene **Zofia Dega-Szafran**, **Mirosław Szafran**, and **Bogumił Brycki**
- 1683 Mononuclear heterocyclic rearrangements. Part 15. Kinetic study of the amine-catalysed rearrangement of some *Z*-arylhydrazones of 3-benzoyl-5-phenylisoxazole into 2-aryl-4-phenacyl-5-phenyl-1,2,3-triazoles in acetonitrile and in benzene **Vincenzo Frenna**, **Silvestre Buscemi**, and **Caterina Arnone**
- 1687 Complex formation of phenolphthalein and some related compounds with β -cyclodextrin **Ágnes Buvári**, **Lajos Barcza**, and **Márton Kajtár**
- 1691 Spectral properties and isomerism of nitroenamines. Part 1. 3-Amino-2-nitroacrylic esters **José-Luis Chiara**, **Antonio Gómez-Sánchez**, **Francisco-Javier Hidalgo**, and **Juana Bellanato**
- 1699 A surface area approach to determination of partition coefficients **Patrick Camilleri**, **Simon A. Watts**, and **Joe A. Boraston**
- 1709 Kinetic study on exchange reaction of alkyl halides under gas-liquid phase-transfer catalysis conditions **Pietro Tundo**, **Francesco Trotta**, and **Giovanni Moraglio**
- 1713 Preparation, solid-state characterisation and X-ray crystal structure of a 1:1 complex of tetrathiafulvalene and *m*-dinitrobenzene (TTF-*m*DNB) **Martin R. Bryce**, **Stephen R. Davies**, **Michael B. Hursthouse**, and **Majid Motevalli**
- 1717 Substitution at saturated carbon. Part 26. A complete analysis of solvent effects on initial states and transition states for the solvolysis of the *t*-butyl halides in terms of *G*, *H*, and *S* using the unified method **Michael H. Abraham**, **Priscilla L. Grellier**, **Asadollah Nasehzadeh**, and **Rosemary A. C. Walker**
- 1725 Molecular receptors. Synthesis and X-ray crystal structure of an 18-crown ether phenol complex of 1,2-diaminoethane **George Ferguson**, **Branko Kaitner**, **Christine M. Browne**, and **M. Anthony McKervey**
- 1729 Polymerisation and related reactions involving nucleophilic aromatic substitution. Part 1. The rates of reaction of substituted 4-halogenobenzophenones with the potassium salts of substituted 4-hydroxybenzophenones **John H. Ridd**, **Taher I. Yousaf**, and **John B. Rose**

- 1735 Polymerisation and related reactions involving nucleophilic aromatic substitution. Part 2. The rates of reaction of substituted 4-halogenobenzophenones with the salts of substituted hydroquinones **Jonathan R. Lovering, John H. Ridd, David G. Parker, and John B. Rose**
- 1739 Polymerisation and related reactions involving nucleophilic aromatic substitution. Part 3. Mathematical models of the polycondensation reactions of halogenobenzophenones **D. Brynn Hibbert, John P. B. Sandall, Jonathan R. Lovering, John H. Ridd, and Taher I. Yousaf**
- 1743 Conformation and complexation of a cyclic dodecapeptide [cyclo(L-Leu-L-Phe-L-Pro)₄] with alkaline earth metal ions in acetonitrile **Eiichi Ozeki, Shunsaku Kimura, and Yukio Imanishi**

Watts, Simon A., 1699
Yousaf, Taher I., 1729, 1739

Perkin Communications

Communications will be published in *Perkin Transactions I* from the beginning of 1989. These will consist of preliminary accounts of novel and significant work of exceptional interest in any branch of organic, bio-organic, or physical organic chemistry. Material of wide general appeal is more appropriately submitted to *Chemical Communications*; *Perkin Communications* are intended for work of a more specialist nature. Where relevant, typical experimental data will be included; otherwise the principles governing acceptance are essentially the same as for *Chemical Communications*. Where appropriate, authors should provide corroborative material, not for publication, as supplementary information for referees. Full papers based upon communications will be acceptable subsequently provided that they represent a substantial amplification and extension of the original material.

Individual articles should be as brief as possible [normally less than 1 200 words (*ca.* 2 printed pages) or the equivalent]. The summary should be restricted to one sentence only. Otherwise, the format and style of presentation should be the same as for a full paper.

Times to publication will be similar to those for *Chemical Communications*. In order to achieve this, failure of an author to produce a revised script in response to referees' comments within 4 weeks will be regarded as a withdrawal of the communication. Furthermore, proof corrections received more than 2 weeks after despatch of proofs by the printer will not be incorporated.

NOTE: An asterisk in the heading of each paper indicates the author who is to receive any correspondence.
