

Journal of Chemical Research, Issue 11, 1989

Other papers in the subject areas covered by *J. Chem. Soc.* are published in synopsis/microform format in *J. Chem. Research*. For the benefit of readers of *J. Chem. Soc.*, the contents list of *J. Chem. Research (S)*, Issue 11, is reproduced below.

- 329 The Reactions of 3-Acetyl-2*H*-1-benzopyran-2-ones with Ammonia and Ammonium Acetate **Conor N. O'Callaghan** and
(M 2501) **T. Brian H. McMurry**
- 330 *N*-Alkoxy-*N'*-cyanodiazene *N*-Oxides **Thanikavelu Manimaran, Lionel T. Wolford, Edwin D. Stevens, Joseph H. Boyer, and**
(M 2514) **Cheryl Klein**
- 331 Oxidatively Assisted Alkylations of Sodium Nitrocyamide and Sodium Azide **Thanikavelu Manimaran, Lionel T. Wolford,**
(M 2525) **and Joseph H. Boyer**
- 332 The Chemistry of Iron in Biosystems. Part 2. A Hydrolytic Model of the Complex Formation Between Iron(III) and Citric Acid in
(M 2533) Aqueous Solutions **Xavier Ribas, Victoria Salvadó, and Manuel Valiente**
- 333 Tricyclic Heteroaromatic Systems Containing a Bridgehead Nitrogen Atom. Part 2. Imidazo[1',2':2,3]isothiazolo[5,4-*d'*]-
(M 2580) pyrimidines and Pyrazolo[5,4-*d'*:2,3-*a'*]dipyrimidines **Julian M. C. Golec** and **Richard M. Scowston**
- 334 Analogues of Blocked Disaccharides bearing an *N*-Hydroximino Bridge and Nitroxyl Free Radicals thereof **Jean M. J.**
(M 2601) **Tronchet, Nicoletta Bizzozero, Maria Koufaki, Ford Habashi, and Michel Geoffroy**
- 335 Redox Potentials of Vanadium-containing Couples. Part 2. The Determination of the Formal Vanadium(IV)/Vanadium(III) Potential
(M 2701) at 25 °C in Aqueous 1 M Chloride Solution **Santino Orecchio, Vincenzo Romano, and Roberto Zingales**
- 336 Three New Electrophilic Quinones
(M 2682) **Masayuki Tomida** and **H. K. Hall, Jr.**
- 337 2-Substituted 3,3-Diethyloxetanes
(M 2740) **Alan O. Fitton, John Hill, David E. Jane, and Ross Millar**
- 338 Small-ring Synthesis induced by the Electrogenerated Superoxide Anion **Italo Carelli, Antonella Curulli, and Achille**
(M 2554) **Inesi**
- 340 Diels-Alder Reactions of Isoquinolin-3(2*H*)-ones. Part 6. An Unusual Diels-Alder Reaction of 4-Benzyl-1-phenylbenzo[*g*]-
(M 2572) isoquinolin-3-ol with *N*-Phenylmaleimide **László Hazai, Gábor Tóth, and Gyula Deák**
- 342 Lefevreiosides: Four Novel Triterpenoid Glycosides from the Sea Cucumber *Cucumaria lefevrei* **Jaime Rodriguez** and
(M 2620) **Ricardo Riguera**
- 344 Obtention of Anthranil Derivatives by a Modified Bischler-Napieralski Reaction **François Roblot, Reynard Hocquemiller,**
(M 2637) **and André Cavé**
- 346 Reissert Compound Formation with Fused Five-membered Ring Heterocycles **Barrie C. Uff, Yee-Ping Ho, David S. Brown,**
(M 2652) **Ian Fisher, Frank D. Popp, and Joydeep Kant**
- 348 The Synthesis of Novel Substituted 1-Benzoxepine-3,5(2*H*,4*H*)-diones **Gabriel Gabriel, Robert Pickles, and John H. P.**
(M 2713) **Tyman**
- 350 Shilajit. Part 4. Chemistry of Two Bioactive Benzopyrone Metabolites **Shibnath Ghosal, Jawahar Lal, Sushil K. Singh,**
(—) **Yatendra Kumar, and Ferenc Sóti**
- 352 Addition of Organosilyl Radicals to Carbon Dioxide: an Electron Spin Resonance Study **Karen M. Johnson** and **Brian P.**
(—) **Roberts**
- 354 Base-induced Rearrangement of 1,1,1,2-Tetramethyl-2-benzoylhydrazinium Iodide to *N*-(Dimethylaminomethyl)-*N*-methyl-
(—) benzamide **Sally Freeman** and **Martin J. P. Harger**
- 356 Determination of Heteronuclear Dipolar Contributions to Proton Spin-Lattice Relaxation induced by Low Abundant Nuclei
(—) **Neri Nicolai** and **Claudio Rossi**
- 358 Biosynthesis of the *seco*-Pyrrolizidine Base Otonecine **Henry A. Kelly, Ellen K. Kunec, Michael Rodgers, and David J.**
(—) **Robins**
- 360 Diene Chlorination with Manganese Dioxide-Trimethylchlorosilane **Franco Bellesia, Franco Ghelfi, Ugo M. Pagnoni, and**
(—) **Adriano Pinetti**
- 362 Formation of $\cdot\text{CFCl}_2$ and $\cdot\text{CFCl}$ Radicals in Irradiated CFCl_3 Systems, studied by Electron Spin Resonance Spectroscopy
(—) **Martyn C. R. Symons** and **Jane L. Wyatt**
- 364 The Conformers of the Cyclopropylmethyl Anion: an *ab initio* Molecular Orbital Study
(—) **Wai-Kee Li**
- 366 Reduction of Diteluratocuprate(III) by Phosphite Ion in Alkaline Medium **Kalyan Kali Sen Gupta, Jolly Karak, and Ambikesh**
(—) **Mahapatra**

N.B. The numbers in parentheses, prefaced by *M*, indicate the first frame occupied by the *full-text version* of the paper in *J. Chem. Research (M)*. Where no such number is given, the paper as published in *J. Chem. Research (S)* is complete in itself, and there is no extra material in Part *M*.

The Chemistry of Linear Oligopyrroles and Bile Pigments

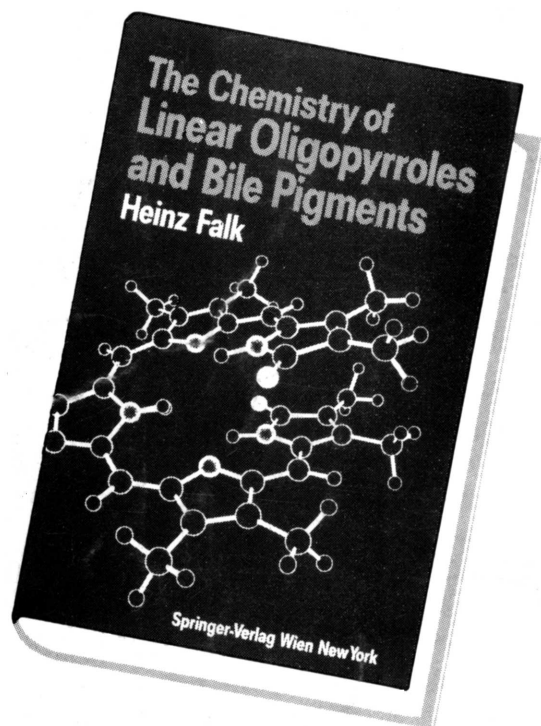

This monograph will be helpful to the specialist or researcher as well as to the newcomer in this interdisciplinary field of linear oligopyrrole chemistry, which ranges from medicinal and biological to physical sciences.

Linear oligopyrroles and bile pigments are important as antenna pigments of photosynthesis, light sensory pigments in plants, and products of animal and human

metabolism. Whereas di-, tri-, penta- and polypyrroles play no part in nature, they are useful as synthons in the synthesis of e.g. porphyrins and corrins, and even as organic conductors.

Discussion of the chemistry of linear oligopyrroles is started with reviews of nomenclature, occurrence, formation, importance, and history. Their structural and stereochemical aspects are illustrated by ball and stick models of X-ray crystallographic determinations as well as by the results obtained by various methods for their state of solution. The synthesis of these compounds is treated in a methodological way providing typical examples instead of listing all syntheses executed so far. Selected physical properties like absorption, emission, chiroptical data, and nuclear magnetic resonance are covered in detail. Nucleophilic, electrophilic, and radical reactions are discussed from the standpoint of semiempirical calculations providing typical examples. Moreover, their photochemistry, carrier mediated transport, skeletal transformations, redox properties, and catalytic function are included.

The book will provide advanced students approaching the subject from a variety of disciplines with the chemical background necessary to cope with the sometimes rather complicated material, but it will also provide the active researcher in this field with a timely review to inspire future work.

1989. 344 figures. XII, 621 pages.
