

# Information for Authors

**1. SUBMISSION OF MANUSCRIPTS.** Four copies of the manuscript and a graphical abstract not larger than  $9.5 \times 4$  cm should be addressed to the Editor at the address given on the inside front cover or, for **North American Authors**, to Professor T. Hudlicky, *North American Associate Editor*, Department of Chemistry, Virginia Tech, Blacksburg, VA 24061-0212, USA. Receipt of the submission will be acknowledged and the paper will be given a reference number which should be quoted in all further correspondence. The text should be typed in double spacing on one side of the paper. The Author to whom correspondence and proofs should be addressed should be clearly indicated on the first page along with the full postal address and FAX number.

**2. REFEREEING AND CONDITIONS OF ACCEPTANCE.** Papers submitted will be reviewed by at least two referees, whose reports form the basis of the Editor's decision. Papers are accepted on the understanding that the work described is original and has not been published elsewhere and that the Author has obtained any necessary authorisation for publication of the material submitted. Authors are solely responsible for the factual accuracy of their contributions. There are no page charges.

**3. COPYRIGHT.** Upon acceptance of a paper, copyright is transferred entirely to the Society. Any reasonable request from an author to reproduce his own work, partly or wholly, elsewhere will not be refused.

**4. NOMENCLATURE AND STYLE.** IUPAC recommendations on nomenclature, symbolism and units are generally implemented and British spellings are used. Illustrated compound structures should be numbered sequentially with bold arabic numerals and pictorially represented chemical transformations should be designated as schemes. The term equation (eqn.) should be reserved for mathematical expressions. Figure captions and tables should be typed on separate sheets and placed at the end of the manuscript. Tables should be numbered sequentially and headed by a brief description of the content. Authors claiming new compounds should provide sufficient spectroscopic and physical data to establish the purity and identity of the compound. An exact molecular mass does not provide proof of homogeneity and should be supported by *e.g.* TLC or GLC evidence.

**5. TITLE AND SUMMARY.** Each article must have a concise and accurate title and be accompanied by a summary of 50–250 words. The summary should be sufficiently comprehensive to enable the selection of appropriate index terms for use by abstracting services.

**6. ILLUSTRATIONS.** Most displayed formulae are prepared in-house. However, the structures accompanying a manuscript should be carefully drawn on separate sheets and placed at the back. Illustrations can be submitted on disk provided the ChemDraw package is used. The preference settings are as follows: fixed length 0.7 cm, line width 0.025 cm, bold width 0.092 cm, hash spacing 0.099 cm, bond spacing 20% of length, font Helvetica 12 pt. Page set-up 60%. Figures of sufficient quality are reproduced directly and should be drawn with black ink on good quality white paper. Photocopies are not suitable.

**7. REFERENCES.** This section should contain only bibliographic references. Other details should be placed as footnotes in appropriate parts of the text. References take the form S. I. Zones, *J. Chem. Soc., Faraday Trans.*, 1991, **87**, 3709 (journal) and I. Fleming, *Frontier Orbitals and Organic Chemical Reactions*, Wiley, Chichester, 1978 (book).

**8. ACKNOWLEDGEMENTS.** These should be brief and relevant. Dedications are not permitted.

**9. COMMUNICATIONS.** This section is for rapid publication of preliminary results. Format and style as for full papers, except that the length should not exceed two printed pages (*ca.* seven manuscript pages). Written justification for urgent publication should be supplied with the manuscript on submission.

**10. PROOFS.** Two copies of the proofs are despatched to the author indicated on the manuscript. Alterations should be kept to a minimum.

**11. REPRINTS.** Fifty reprints are supplied free of charge. Additional copies may be purchased; the order form is despatched with the proof. Reprints with covers may be purchased at a small extra charge.

**12. SUPPLEMENTARY MATERIAL.** Material important, but not central, to an article may be deposited at the British Library by the Society following acceptance of the article for publication. A footnote to this effect is then placed in the text. Alternatively papers containing extensive experimental or numerical data can be published in the Synopsis and Full Text format in *Journal of Chemical Research*.

**13. CRYSTALLOGRAPHIC PAPERS.** Papers that are primarily crystallographic will not normally be accepted for publication. Papers where the chemistry is supported by a crystallographic determination should contain all the necessary data for the structure to be verified by a referee. All data, except for structure factors, are available from the Cambridge Crystallographic Data Centre.

**14. MOLECULAR-MODELLING PAPERS.** Authors describing molecular modelling should provide sufficient data to enable an objective evaluation by an independent assessor. Detailed guidelines may be found in *J. Med. Chem.*, 1988, **31**, 2230.

Complete and detailed 'Instructions for Authors' are given in issue 1 of *Perkin Transactions 1* and 2.

# NEW & RECENT BOOKS FROM THE ROYAL SOCIETY OF CHEMISTRY

Ref No 1098

## Container Molecules and their Guests

By Donald J. Cram and Jane M. Cram, *University of California*

**Monographs in Supramolecular Chemistry** - Series Editor: J. Fraser Stoddart, FRS, *University of Birmingham, UK*

This volume covers the evolution of host-guest complexation chemistry in the minds and hands of Nobel Prize winner Donald Cram and his co-workers at UCLA, over the 25-year period from 1970-1994. It deals with the fundamental principles and objectives that govern this rapidly developing subject and illustrates the emergence of a new field of biomimetic chemistry. The book demonstrates how a number of techniques, such as molecular modeling, synthesis, crystal structure, NMR solution structure and mass spectral structure determinations can be combined to develop a new branch of organic chemistry. It discusses the chemistry of completely new families of complexes - the carceplexes, hemicarceplexes and velcralexes - and reviews for the first time the uses of the interiors of hemicarceplexes as a new phase for carrying out chemical reactions and for protecting unstable species. Many will be inspired by the wonderful achievements that Cram and his team have made in this exciting branch of supramolecular chemistry.

**Hardcover**      **xiv + 224 pages**      **ISBN 0 85186 972 6**      **Price £49.50**      **Expected date of publication: July 1994**

Ref No 1051

## Medicinal Chemistry: Principles and Practice

Edited by Frank D. King, *SmithKline Beecham Pharmaceuticals, Harlow, UK*

This book introduces the principles and practices of modern medicinal chemistry and covers all aspects of drug discovery from the initial lead to final development. It teaches how to convert a lead compound into a potential drug and provides recent case histories as examples of successes.

**Medicinal Chemistry: Principles and Practice** is unique in dealing with the subject in such a practical way and is the only book currently available to bring together all areas of the subject in one volume. This breadth of coverage is supplemented by references to specialist monographs and reviews, where the reader can find more detail on specific topics of interest if required.

**Softcover**      **Approx 340 pages**      **ISBN 0 85186 494 5**      **Price £39.50**      **Expected date of publication: End August 1994**

Ref No 238

## Amino Acids, Peptides and Proteins - Volume 25

Senior Reporter J.S. Davies, *University College of Swansea*

Formerly entitled *Amino Acids and Peptides*, this new volume provides a review of the literature published during 1992.

**Contents:** Amino Acids; Peptide Synthesis; Analogue and Conformational Studies on Peptide Hormones and Other Biologically Active Peptides; Cyclic, Modified, and Conjugated Peptides; Current Trends in Protein Research; Metal Complexes of Amino Acids and Peptides.

**Specialist Periodical Report**      **Hardcover**      **xiv + 410 pages**      **ISBN 0 85186 234 9**      **1994**      **Price £110.00**

Ref No 185

## Biotransformations: A Survey of the Biotransformations of Drugs and Chemicals in Animals - Volume 6

Edited by David R. Hawkins, *Huntingdon Research Centre Ltd*

Now in its sixth outstanding volume, **Biotransformations** has become established as a unique and important source for those involved in the discovery and development of new compounds. It now broadly covers the scientific literature for the period 1987 to 1992. The series provides a ready way of accessing information on the known pathways for the biotransformation of structurally-related compounds. Key functional groups provide an index-related procedure for retrieving information on compounds of interest. A further index allows the retrieval of examples of specific biochemical reactions which may have wider application.

**Hardcover**      **xxxii + 412 pages**      **ISBN 0 85186 127 X**      **Price £130.00**  
**Expected date of publication: End June 1994**

### To order please contact:

The Royal Society of Chemistry, Turpin Distribution Services Limited, Blackhorse Road, Letchworth, Herts SG6 1HN, United Kingdom.  
Telephone: +44 (0) 462 672555. Fax: +44 (0) 462 480947. Telex: 825372.  
Please quote your credit card details. We can now accept Access/Visa/Mastercard/EuroCard.

Turpin Distribution Services Limited is wholly owned by The Royal Society of Chemistry.

### For information on other books and journals please contact:
