

The 6th international conference on polymer-solvent complexes and intercalates was held from the 29th of August to the 1st of September 2006 in Manchester, UK. This book contains a selection of papers presented at the conference. This cycle of conferences is specifically dedicated to polymer-solvent compounds also often named complexes, intercalates or crystallosolvates. These compounds originate from the intimate organization of solvent molecules together with polymer chains. Since the 1st edition which was held

in Meyrueis, France 10 years ago, an increasing number of contributions have been presented by researchers in the biomaterial field underlying how relevant the topic has become to biopolymers. The conference organizers are grateful to SETARAM, Macro Group UK, Polymer Physics Group, Huntsman, TA Instruments, Molecular Materials Center and The University of Manchester for sponsoring the event.
