C. M. Roland* and K. L. Ngai: Segmental Relaxation and Molecular Structure in Polybutadienes and Polyisoprene. Volume 24, Number 19, September 16, 1991, p 5315.

An omission occurred at the beginning of the Summary section which causes the first sentence therein to contradict the main finding of the paper. The first sentence in the Summary section should be replaced with the following:

A distribution of relaxation times is commonly invoked to account for nonexponential relaxation in polymers. This interpretation is difficult to reconcile with the absence found herein of any correlation between the breadth of the presumed distribution and the structural diversity of the polymer segments.
