3[B-E, K, S].—J. C. P. MILLER & F. C. POWELL, The Cambridge Elementary Mathemutical Tables, Cambridge University Press, Cambridge, 1965, 47 pp., 25 cm. Frice \$0.50 (paperbound).

The title page carries the information that these four-figure tables were compiled and arranged for the Cambridge Local Examinations Syndicate.

Herein we find conveniently arranged 4D (or 4S) tables of common logarithms and antilogarithms, natural and logarithmic values of trigonometric functions (at intervals of 0°.1), powers (reciprocals, squares, cubes, square roots, cube roots), factorials, natural logarithms, exponential and hyperbolic functions, trigonometric functions for angles in radians, conversion tables (radians to degrees and conversely), binomial coefficients (exact values to n = 20), normal distribution function and related statistical functions. Also included are conversion tables for weights and measures and for electromagnetic quantities, and an extensive list of physical constants.

All the mathematical tables are supplied with first differences, and a separate table of proportional parts to tenths is included.

The user will benefit from a perusal of the introductory notes on the use of these tables, which include a detailed discussion of interpolation therein and other methods of use.

These excellent tables should well serve the purpose for which they are intended, and will be useful to others requiring a compact set of elementary mathematical tables.

4[D].—C. ATTWOOD, Six-Figure Trigonometrical Functions of Angles in Degrees and Minutes, Practical Tables Series No. 1, Pergamon Press, Oxford, 1965, vii + 68 pp., 20 cm. Price 7s 6d (paperback).

This is the fifth edition of a set of trigonometrical tables originally published in 1942 by the Ford Motor Company, Ltd. in Dagenham, England.

The main table consists of natural values of the six standard functions to 6S for every sexagesimal minute, arranged semiquadrantally, with initial and terminal first differences shown at the top and bottom of each column of tabular data. Auxiliary tables of proportional parts for interpolation in tenths of a minute and for subdivisions of 5 seconds are given. A 2-page table gives decimal approximations of the first 100 multiples and submultiples of π and π^{-1} to 6 or 7S, as well as $\pi n^2/4$ for n = 1(1)100 to similar precision. A few other, related constants such as $\pi^{\pm 2}$, $\pi^{\pm 3}$, $\pi^{\pm 1/2}$, and $\pi^{1/3}$ are given to 6 or 7D in a footnote to this table.

The customary conversion tables from minutes and seconds to degrees (6D),
