

# Mathematical Reviews Sections

**ENJOY THE CONVENIENCE OF HAVING MATHEMATICAL REVIEWS AT YOUR DESK. HAVE YOU THOUGHT HOW REALLY HANDY IT WOULD BE TO HAVE THE SECTIONS RELEVANT TO YOUR RESEARCH RIGHT BEFORE YOU?** MR has been divided into 37 affordable Sets for individual subscribers. Each month you can receive the Section Sets you have chosen with an author index. With your June sets you will receive a semiannual author index (just as you would for MR) and in December an annual author and subject index (as with MR). Also available for 1982 Section subscribers are three-ring binders of sturdy quality in the familiar tangerine color of MR to hold your subscription. The binders have a two-inch spine and are adequate to hold 400 pages.

Section Sets are divided into Class 1 and Class 2 according to the estimated number of pages per year.

Set	Sections	Subjects	<input type="checkbox"/> 2I	42, 43, 44, 45	Harmonic analysis, integral transforms/equations (Class 2)
<input type="checkbox"/> 1A	00, 01	General, history, biography (Class 1)	<input type="checkbox"/> 1J	46	Functional analysis (Class 1)
<input type="checkbox"/> 1B	03, 04	Logic, foundations, set theory (Class 1)	<input type="checkbox"/> 1K	47	Operator theory (Class 1)
<input type="checkbox"/> 1C	05	Combinatorics (Class 1)	<input type="checkbox"/> 2J	49	Calculus of variations, optimization (Class 2)
<input type="checkbox"/> 2A	06, 08	Order, lattices, general systems (Class 2)	<input type="checkbox"/> 2K	51, 52	Geometry, convex sets (Class 2)
<input type="checkbox"/> 1D	10	Number theory (Class 1)	<input type="checkbox"/> 1L	53	Differential geometry (Class 1)
<input type="checkbox"/> 2B	12	Algebraic number theory, field theory, polynomials (Class 2)	<input type="checkbox"/> 2L	54	General topology (Class 2)
<input type="checkbox"/> 2C	13, 14	Commutative rings and algebras, algebraic geometry (Class 2)	<input type="checkbox"/> 1M	55, 57	See 1E (18, 55, 57)
<input type="checkbox"/> 2D	15	Linear and multilinear algebra, matrix theory (Class 2)	<input type="checkbox"/> 1N	58	Global analysis, analysis on manifolds (Class 1)
<input type="checkbox"/> 2E	16, 17	Associative/nonassociative rings, algebras (Class 2)	<input type="checkbox"/> 1P	60	Probability theory and stochastic processes (Class 1)
<input type="checkbox"/> 1E	18, 55, 57	Category theory, algebraic topology, manifolds (Class 1)	<input type="checkbox"/> 1Q	62	Statistics (Class 1)
<input type="checkbox"/> 1F	20	Group theory, generalizations (Class 1)	<input type="checkbox"/> 1R	65	Numerical analysis (Class 1)
<input type="checkbox"/> 2F	22	Topological groups, Lie groups (Class 2)	<input type="checkbox"/> 1R	68	Computer science (including automata) (Class 1)
<input type="checkbox"/> 2G	26, 28	Real functions, measure, integration (Class 2)	<input type="checkbox"/> 2M	70, 73	Mechanics of particles, systems, (Class 2)
<input type="checkbox"/> 1G	30, 31, 32, 33	Complex analysis, potential theory, special functions (Class 1)	<input type="checkbox"/> 2N	76, 78, 80	Fluid mechanics, optics, electromagnetics, thermodynamics (Class 2)
<input type="checkbox"/> 1H	34	Ordinary differential equations (Class 1)	<input type="checkbox"/> 1S	81	Quantum mechanics (Class 1)
<input type="checkbox"/> 1I	35	Partial differential equations (Class 1)	<input type="checkbox"/> 2P	82, 83, 85, 86	Other physics, astronomy, astrophysics, geophysics (Class 2)
<input type="checkbox"/> 2H	39, 40, 41	Finite differences, sequences, approximations (Class 2)	<input type="checkbox"/> 1T	90	Economics, operations research, programming, games (Class 1)
			<input type="checkbox"/> 2Q	92	Biology and behavioral sciences (Class 2)
			<input type="checkbox"/> 1U	93	Systems theory; control (Class 1)
			<input type="checkbox"/> 1V	94	Information and communication, circuits (Class 1)

	First Set		Each Add'l Set		Optional Binder
	Class 1	Class 2	Class 1	Class 2	\$5.00 each
Individual member	\$36	\$27	\$30	\$21

# Springer for Computational Physics

## **A Computational Method in Plasma Physics**

F. Bauer, O. Betancourt, and P. Garabedian

This volume presents a numerical method for computation and analysis of the equilibrium and stability of a plasma in toroidal geometry. The book also includes a description of the computer code which implements the method, as well as a Fortran listing.

1978/ 144 pp./ 22 illus./ Cloth \$19.00  
Springer Series in Computational Physics  
ISBN 0-387-08833-4

## **Finite-Difference Techniques for Vectorized Fluid Dynamics Calculations**

Edited by D.L. Book

Faster than standard scalar routines, the techniques described in this volume are based on methods designed for vector computers. Theoretical background, competitive and kindred techniques, examples, and lists of program modules are also given. This is an excellent introduction to the topic.

1981/ 226 pp./ 60 illus./ Cloth \$32.00  
Springer Series in Computational Physics  
ISBN 0-387-10482-8

## **Computational Methods for Fluid Flow**

R. Peyret and T.D. Taylor

In describing practical finite difference, finite element, and spectral methods, this volume serves as a guide to computational methods for fluid flow which avoid complex mathematical proofs. This approach

will be invaluable to engineers and scientists in solving viscous and inviscid problems for compressible and incompressible flows.

1982/ 416 pp./ 129 illus./ Cloth \$42.50  
Springer Series in Computational Physics  
ISBN 0-387-11147-6

## **Unsteady Viscous Flows**

D.P. Telionis

The problems posed by the effects of viscosity in unsteady flows require sensitive numerical techniques for their solution. This volume reviews such techniques, offers a description of perturbation methods, and discusses research done by the author in turbulent boundary layers.

1981/ 408 pp./ 132 illus. Cloth \$38.00  
Springer Series in Computational Physics  
ISBN 0-387-10481-X

## **Implementation of Finite Methods for Navier-Stokes Equations**

F. Thomasset

The author's rather unique approach separates this book from other texts of its kind. This volume surveys the finite element methods for numerical solutions to Navier-Stokes equations, but requires no knowledge of structural mechanics, and at the same time reduces mathematical concepts to a minimum.

1981/ 161 pp./ 86 illus./ Cloth \$28.00  
Springer Series in Computational Physics  
ISBN 0-387-10771-1

### Information for Contributors

Manuscripts should be typewritten double-spaced in the format used by the journal. For journal abbreviations, see the latest *Mathematical Reviews* volume index. An author should submit the original and two copies of the manuscript and retain one copy. The author may suggest an appropriate editor for his paper. It is recommended that the author acquaint himself with the pertinent material contained in "A Manual for Authors of Mathematical Papers," which is available from the American Mathematical Society. All contributions intended for publication and all books for review should be addressed to James H. Bramble, Chairman, Editorial Committee, Mathematics of Computation, Department of Mathematics, White Hall, Cornell University, Ithaca, New York 14853. The date received, which is published with the final version of an accepted paper, is the date received in the office of the Chairman of the Editorial Committee, and it is the responsibility of the author to submit manuscripts directly to this office. Institutions sponsoring research reported in the journal are assessed page and microfiche charges.

Each article submitted for publication must be accompanied by a brief and reasonably self-contained abstract, and by 1980 *Mathematics Subject Classification* numbers. If a list of key words and phrases is included, it will be printed as a footnote on the first page. A list of the classification numbers may be found in the 1978 Subject Index to *Mathematical Reviews*.

The research journals of the American Mathematical Society carry a page charge of \$50.00 per page to help defray the cost of publication. This amount is charged to the institution or to a contract supporting the research reported in the published paper. The publication charge policy of the United States Federal Council for Science and Technology (FCST) is reported on page 112 of the February, 1975 issue of the NOTICES of the American Mathematical Society. In no case is the author personally responsible for paying the page charge, nor is acceptance of the author's paper for publication dependent upon payment of the page charge.

### Copying and Reprinting

Individual readers of this publication, and nonprofit libraries acting for them are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews provided the customary acknowledgement of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication (including abstracts) is permitted only under license from the American Mathematical Society. Requests for such permission should be addressed to the Executive Director, American Mathematical Society, Box 6248, Providence, Rhode Island 02940.

The appearance of the code on the first page of an article in this journal indicates the copyright owner's consent for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law, provided that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc., 21 Congress Street, Salem, Massachusetts 01970. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotion purposes, for creating new collective works, or for resale.
