

## Editorial Information

As of September 30, 1999, the backlog for this journal was approximately 4 issues. This estimate is the result of dividing the number of manuscripts for this journal in the Providence office that have not yet gone to the printer on the above date by the average number of articles per issue over the previous twelve months, reduced by the number of issues published in six months (the time necessary for editing and composing a typical issue). In an effort to make articles available as quickly as possible, articles are posted to e-MATH individually soon after proof is returned from authors and before appearing in an issue.

A Consent to Publish and Copyright Agreement is required before a paper will be published in this journal. After a paper is accepted for publication, the Providence office will send out a Consent to Publish and Copyright Agreement to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

## Information for Authors

**Initial submission.** An author should submit three paper copies of the manuscript. Initial submission by e-mail is not allowed. The author may suggest an appropriate editor for his paper. All contributions intended for publication and all books for review should be addressed to Lars B. Wahlbin, Managing Editor, Mathematics of Computation, Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall, Cornell University, Ithaca, NY 14853-3801. The date received, which is published with the final version of an accepted paper, is the date received in the office of the Managing Editor, and it is the responsibility of the author to submit manuscripts directly to this office.

The first page must consist of a *descriptive title*, followed by an *abstract* that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The *descriptive title* should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The *abstract* must be brief and reasonably self-contained. Included with the footnotes to the paper should be the 2000 *Mathematics Subject Classification* representing the primary and secondary subjects of the article. The classifications are accessible from <http://www.ams.org/msc>. The list of classifications will also be available in print starting with the 1999 annual index of *Mathematical Reviews*. The Mathematics Subject Classification footnote may be followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest *Mathematical Reviews* annual index. The series abbreviations are also accessible from <http://www.ams.org/publications>. When the manuscript is submitted, authors should supply the editor with electronic addresses if available. These will be printed after the postal address at the end of each article.

**Electronically prepared manuscripts.** For the final submission of accepted papers, the AMS encourages use of electronically prepared manuscripts, with a strong preference for  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ . To this end, the Society has prepared  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$  author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, the *AMS Author Handbook*, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$  style file automatically provide hypertext linking to the bibliography and other elements of the article for searching electronically on the World Wide Web. Because linking must often be added manually to electronically prepared manuscripts in other forms of  $\mathcal{T}\mathcal{E}\mathcal{X}$ , using  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$  also reduces the amount of technical intervention once the files are received by the AMS. This results in fewer errors in processing and saves the author proofreading time.  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$  papers also move more efficiently through the production stream, helping to minimize publishing costs.

$\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$  is the highly preferred format of  $\mathcal{T}\mathcal{E}\mathcal{X}$ , but author packages are also available in  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{T}\mathcal{E}\mathcal{X}$ . Those authors who make use of these style files from the beginning of the

writing process will further reduce their own efforts. Manuscripts prepared electronically in  $\text{\LaTeX}$  or plain  $\text{\TeX}$  are normally not acceptable due to the high amount of technical time required to insure that the file will run properly through the AMS in-house production system.  $\text{\LaTeX}$  users will find that  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\text{\LaTeX}$  is the same as  $\text{\LaTeX}$  with additional commands to simplify the typesetting of mathematics, and users of plain  $\text{\TeX}$  should have the foundation for learning  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\text{\LaTeX}$ .

Authors may retrieve an author package from e-MATH via the World Wide Web through the URL <http://www.ams.org/tex/> or via FTP to <ftp.ams.org> (login as `anonymous` and enter username as password). The author package can also be obtained free of charge by sending e-mail to [pub@ams.org](mailto:pub@ams.org) (Internet) or from the Publication Division, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. When requesting an author package, please specify  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\text{\LaTeX}$  or  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\text{\TeX}$ , Macintosh or IBM (3.5) format, and the publication in which your paper will appear. Please be sure to include your complete mailing address.

The final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also send the final version of the paper manuscript to the Managing Editor, who will forward a copy to the Providence office. Editors will require authors to send their electronically prepared manuscripts to the Providence office in a timely fashion. Electronically prepared manuscripts can be sent via e-mail to [pub-submit@ams.org](mailto:pub-submit@ams.org) (Internet) or on diskette to the Electronic Prepress Department, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. When sending a manuscript electronically, please be sure to include a message indicating in which publication the paper has been accepted. No corrections will be accepted electronically. Authors must mark their changes on their proof copies and return them to the Providence office. Complete instructions on how to send files are included in the author package.

**Electronic graphics.** Figures may be sent to the AMS in an electronic format. The AMS recommends that graphics created electronically be saved in Encapsulated PostScript (EPS) format. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images.

If the graphics package used does not support EPS output, the graphics file should be saved in one of the standard graphics formats—such as TIFF, PICT, GIF, etc.—rather than in an application-dependent format. Graphics files sent in an application-dependent format are not likely to be used. No matter what method was used to produce the graphic, it is necessary to provide a paper copy to the AMS.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly.

**$\text{\TeX}$  files available.** Beginning with the January 1992 issue of the *Bulletin* and the January 1996 issues of *Transactions*, *Proceedings*, *Mathematics of Computation*, and the *Journal of the AMS*,  $\text{\TeX}$  files can be downloaded from e-MATH, starting from URL <http://www.ams.org/journals/>. Authors without Web access may request their files at the address given below after the article has been published. For *Bulletin* papers published in 1987 through 1991 and for *Transactions*, *Proceedings*, *Mathematics of Computation*, and the *Journal of the AMS* papers published in 1987 through 1995,  $\text{\TeX}$  files are available upon request for authors without Web access by sending e-mail to [file-request@ams.org](mailto:file-request@ams.org) or by contacting the Electronic Prepress Department, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. The request should include the title of the paper, the name(s) of the author(s), the name of the publication in which the paper has or will appear, and the volume and issue numbers if known. The  $\text{\TeX}$  file will be sent to the author making the request after the article goes to the printer. If the requestor

can receive Internet e-mail, please include the e-mail address to which the file should be sent. Otherwise please indicate a diskette format and postal address to which a disk should be mailed. **Note:** Because  $\text{\TeX}$  production at the AMS sometimes requires extra fonts and macros that are not yet publicly available,  $\text{\TeX}$  files cannot be guaranteed to run through the author's version of  $\text{\TeX}$  without errors. The AMS regrets that it cannot provide support to eliminate such errors in the author's  $\text{\TeX}$  environment.

Any inquiries concerning a paper that has been accepted for publication should be sent directly to the Electronic Prepress Department, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248.

**30-day free trial!**

MathSciNet has an especially powerful system of internal links between reviews and provides direct links to the papers themselves if they are available on line. The reviews are classified by subject and are searchable in multiple ways. Thus, it provides an unparalleled method of browsing the literature for serious content (along with accurate bibliographic data).

—Journal of Electronic Publishing,  
University of Michigan Press

**MathSciNet**—available on the Web by subscription—provides searching of over 58 years of *Mathematical Reviews* and *Current Mathematical Publications*. New features and enhancements include:

#### Over 500,000 reviews added to the *Mathematical Reviews* electronic database

The AMS has completed its two-year project of adding full-text reviews from the early archives of *Mathematical Reviews* (MR) to the MathSci database. During that project, all reviews from 1940–1979 were input—over 80,000 pages of MR! The entire collection contains, for the first time online, searchable reviews of a definitive part of mathematical development over the past 60 years.

#### Links from reviews to original journal articles

MathSciNet reviews currently link to abstracts and original articles in 59 mathematics journals.

#### Online mathematical symbols plus hypertext linking

You can now view mathematical symbols online and retain hypertext functionality within a review. Marked records can also be displayed in PDF format.

#### “Retrieve All” records option

From a search result set of 50 or fewer items, you can use the Retrieve All button to display or download all reviews without marking records. If the result set is greater than 50, you can display or download the first 50 items of the result set with the Retrieve First 50 button.

#### Quick Starts available online

Users can now get additional or updated versions of the MathSciNet Quick Start cards online. Users are welcome to download and print any number that they need.

#### Search page indicates current site

The top of the left-hand column of the search page indicates which site you are using.

#### Limit searches to current CMP issue

Select the option, “Current CMP issue through today”, on the Review Search page to limit searches to *Current Mathematical Publications* (CMP) entries. Items from the most current complete issue of CMP in the database plus entries added up to the day of the search will be included. CMP entries are added daily.

#### PDF version of the *Abbreviations of Serials* and the 1991 *Mathematics Subject Classification*

In addition to searching and browsing the journals database, you can display or download the entire *Abbreviations of Serials*. You can also search and browse the 1991 *Mathematics Subject Classification* and display or download the entire publication.

#### Links to all AMS Bookstore items, including the *AMS Chelsea Publishing* series

All items in MathSciNet are available through the AMS Bookstore, including the *AMS Chelsea Publishing* series, and have links from the item directly to its order form to place your order.

#### Current search capabilities include ...

Combining Author-ID results with other search criteria; Searching by preselected date ranges; Linking from Journal ID results to journal URLs; Searching by ISSN or CODEN; Searching or browsing Mathematics Subject Classifications using the “Classification ID” option.

#### Mirror sites:

A new mirror site in Brazil, plus mirror sites in Germany, France, and the U.S., enable alternative, more direct access. All mirror sites are available from pulldown menus on the MathSciNet home page and all MathSciNet search pages. Additional mirror sites are under consideration.

**Consortia pricing is available:** please contact Lori Sprague, Publications Administrator, by telephone at 1-401-455-4064 or by email at [las@ams.org](mailto:las@ams.org).

\* Free trial available for institutions and corporations. For more information, contact the **American Mathematical Society**, Membership and Customer Services Department at 1-800-321-4267 or 1-401-455-4000, worldwide; fax 1-401-455-4046; e-mail: [cust-serv@ams.org](mailto:cust-serv@ams.org).
