

NOTE

New Journal

The creation of a new journal, entitled *Journal of Computational Physics*, to be published by Academic Press, has been announced by the editors. We print a copy of the editorial policy for the information of our readers.

“The policy of the *Journal of Computational Physics* is to publish articles concerning computational techniques developed in the solution of problems describing physical phenomena. The emphasis in this journal is more on the techniques than on the results, that is, on the techniques evolved in the numerical solution of mathematical equations as well as in automated data reduction. These techniques need not necessarily be proven to be mathematically rigorous, but a practical demonstration is desirable.

“By publishing the detailed description of computational techniques, it is hoped that even better techniques will be developed, that computers will be used more effectively, and that further analytical developments will be encouraged. Furthermore, the policy of publishing on any subject of interest to the physical sciences should lead to a fruitful interchange of ideas in the numerical solution of related problems in various branches of science.”

Signed by the editors:

BERNI J. ALDER
SIDNEY FERNBACH
MANUEL ROTENBERG

Manuscripts should be submitted to *Journal of Computational Physics*, University of California, P.O. Box 808, Livermore, California 94551.
