

The Orders of the Known Simple Groups as Far as One Trillion

By Craig Cato

Abstract. In this paper an update of L. E. Dickson's 1901 list of the orders of the known simple groups up to one billion is given. On the microfiche supplement is a complete list of all of the orders of the known simple groups as far as one trillion together with the Lie notation for these groups.

In 1901 L. E. Dickson [3, p. 309] gave a list of the orders of all the known simple groups as far as one million and a partial list of those up to one billion (the groups $\text{PSL}_2(q)$ for $q > 113$ were omitted). Since then no complete list updating Dickson's has appeared in print despite the fact that several new discoveries in this range have been made and much of Dickson's notation is no longer in use.

In Table 1 we bring Dickson's list up to date and, on the microfiche supplement, give a complete list of all the orders of the known nonabelian simple groups as far as one trillion in the Lie notation used by Gorenstein [5, p. 491]. The combined efforts of Marshall Hall, Jr. [6], [7] and Beisiegel and Stintl [1] now show that Table 1 includes all possible simple groups of order up to one million. Table 2 extends Table 1 with the known simple groups of order up to one billion, excluding the groups $\text{PSL}_2(p^n)$. The interested reader is referred to the recent paper by Gallian [4] for a detailed historical account of the search for finite simple groups.

Our notation is as follows: $\text{PSL}_n(q)$ is the projective special linear group; $\text{Sp}_{2n}(q)$ is the symplectic group; $\text{U}_n(q)$ is the unitary group; $\text{Alt}(n)$ is the alternating group; $\text{Sz}(q)$ is the Suzuki group; $G_2(q)$ is the Chevalley group of type G_2 ; $D_4(q)$ is the Chevalley group of type D_4 ; ${}^2D_4(q)$ is the twisted orthogonal group of type D_4 ; ${}^3D_4(q)$ is the triality twisted group of type D_4 . See [2] for complete details on these groups.

Standard notation is used for the sporadic groups: M_i is the group of permutations on i symbols discovered by Mathieu, Ja is the Janko group, HaJ is the Hall-Janko group, HiS is the Higman-Sims group, HJM is the Hall-Janko-McKay group, McL is the McLaughlin group, HHM is the Held-Higman-McKay group, Rud is the Rudvalis group, Suz is the Suzuki group, O'Nan is the O'Nan group, and Co_3 is the Conway .3 group. A brief discussion of these groups can also be found in [2, Chapter 16] and a complete list of all 26 known sporadic simple groups is given in [4].

The author wishes to thank Professor Joseph A. Gallian for suggesting this problem and assisting in the preparation of the paper. I am also indebted to the referee for suggesting a number of improvements.

Received November 18, 1975; revised July 27, 1976 and September 21, 1976.

THE ORDERS OF THE KNOWN SIMPLE GROUPS
AS FAR AS ONE TRILLION
by Craig Cato

Here a complete list of all the orders of the known nonabelian simple groups as far as one trillion together with the Lie notation for these groups [5,p.491] is given. In the list below n represents the rank of the associated complex simple Lie algebras A_n, B_n, C_n, D_n ; q indicates the size of the field; and d designates the order of the central subgroup which was factored out to obtain a simple group. For the sporadic simple groups we set $n=q=d=0$.

The present notation compares with others currently in use as follows: $A_n(q) = SL(n+1, q)$; $C_n(q)/Z(C_n(q)) = S_{2n}(q)$; $B_n(q) = O_{2n}(q)$; $G_2(q) = E_2(q)$; $A_n(q) = SU(n+1, q)$; $B_2(q) = Sz(q)$; $G_2(q) = R.(q)$; $F_4(q) = R_2(q)$.

Also, the following isomorphisms exist among the groups listed below: $A_1(4) \cong A_1(5)/Z(A_1(5)) \cong Alt(5)$; $A_1(7)/Z(A_1(7)) \cong A_2(2)$; $A_1(9)/Z(A_1(9)) \cong Alt(6)$; $A_3(2) \cong Alt(8)$; $A_3(3) \cong B_3(3)/Z(B_3(3))$.
