Information for Contributors

Authors are encouraged to prepare articles electronically with the $\mathcal{A}\mathcal{M}\mathcal{S}$-TEX software package in the AMS pre-print style and to provide the article in this electronic form for typesetting. While this procedure may not reduce the interval between submission and publication of an article, generally much more accurate copy will be returned for proofreading. Production time for manuscripts prepared with other systems, even TEX itself without $\mathcal{A}\mathcal{M}\mathcal{S}$-TEX, currently prevents cost-effective use of the existing electronic form. Before sending an $\mathcal{A}\mathcal{M}\mathcal{S}$-TEX manuscript for typesetting, contact the AMS Composition department for details.

Manuscripts prepared by some means other than $\mathcal{A}\mathcal{M}\mathcal{S}$-TEX should be doubled-spaced and produced in the format used by the journal. For journal abbreviations, see the latest *Mathematical Reviews* volume index. An author should submit the original and two copies of the manuscript and retain one copy. The author may suggest an appropriate editor for his paper. It is recommended that the author acquaint himself with the pertinent material contained in "A Manual for Authors of Mathematical Papers," which is available from the American Mathematical Society. All contributions intended for publication and all books for review should be addressed to Walter Gautschi, Chairman, Editorial Committee, Mathematics of Computation, Department of Computer Sciences, Purdue University, West Lafayette, Indiana 47907. The date received, which is published with the final version of an accepted paper, is the date received in the office of the Chairman of the Editorial Committee, and it is the responsibility of the author to submit manuscripts directly to this office.

Each article submitted for publication must be accompanied by a brief and reasonably self-contained abstract, and by 1980 *Mathematics Subject Classification* (1985 *Revision*) numbers. If a list of key words and phrases is included, it will be printed as a footnote on the first page. A list of the classification numbers may be found in the 1984 Subject Index to Mathematical Reviews. Authors are also encouraged to supply electronic addresses when available. These will be printed after the postal address at the end of each article.

Copying and Reprinting

Individual readers of this publication, and nonprofit libraries acting for them, are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews provided the customary acknowledgment of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication (including abstracts) is permitted only under license from the American Mathematical Society. Requests for such permission should be addessed to the Executive Director, American Mathematical Society, P.O. Box 6248, Providence, Rhode Island 02940-6248.

The appearance of the code on the first page of an article in this journal indicates the copyright owner's consent for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law, provided that the fee of $1.00 plus $.25 per page for each copy be paid directly to Copyright Clearance Center, Inc., 27 Congress Street, Salem, Massachusetts 01970. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotion purposes, for creating new collective works, or for resale.

MATHEMATICS OF COMPUTATION
TABLE OF CONTENTS
April 1990

L. Ridgway Scott and Shangyou Zhang, Finite element interpolation of nonsmooth functions satisfying boundary conditions 483

Rolf Stenberg, Error analysis of some finite element methods for the Stokes problem 495

S. H. Chou and Q. Li, Convergence of the nonconforming Wilson element for a class of nonlinear parabolic problems 509

Bruce A. Wade, Symmetrizable finite difference operators 525

Bernardo Cockburn, Suchung Hou, and Chi-Wang Shu, The Runge-Kutta local projection discontinuous Galerkin finite element method for conservation laws IV: The multidimensional case 545

Anne Kvaernø, Runge-Kutta methods applied to fully implicit differential-algebraic equations of index 1 583

Borislav Bojanov and Geno Nikolov, Comparison of Birkhoff type quadrature formulae 627

I. H. Sloan and J. N. Lyness, Lattice rules: projection regularity and unique representations 649

Gerhard Baur and Bruce Shawyer, Best L^2-approximation of convergent moment series 661

Howard C. Elman and Gene H. Golub, Iterative methods for cyclically reduced non-self-adjoint linear systems 671

A. M. Bruaset, A. Tveito, and R. Winther, On the stability of relaxed incomplete LU factorizations 701

Siegfried M. Rump, Rigorous sensitivity analysis for systems of linear and nonlinear equations 721

Debra A. André, Gary L. Mullen, and Harald Niederreiter, Figures of merit for digital multistep pseudorandom numbers 737

A. J. W. Duijvestijn and B. Helthuis, Some new polyhedra with vertex degree 4 and/or 5 only 749

Daqing Wan, Factoring multivariate polynomials over large finite fields .. 755

Phil Hanlon and David Wales, Computing the discriminants of Brauer's centralizer algebras 771

Jeremy Teitelbaum, The computational complexity of the resolution of plane curve singularities 797

Peter L. Montgomery and Robert D. Silverman, An FFT extension to the $P - 1$ factoring algorithm 839

J. Buchmann, J. W. Sands, and H. C. Williams, p-adic computation of real quadratic class numbers 855

A.-M. Bergé, J. Martinet, and M. Olivier, The computation of sextic fields with a quadratic subfield 869

Francine Delmer and Jean-Marc Deshouillers, On the computation of $g(k)$ in Waring's problem 885

Don Coppersmith, Fermat's Last Theorem (case 1) and the Wieferich criterion 895
