

Information for Contributors

Authors are encouraged to prepare articles electronically with the $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{T}\mathcal{E}\mathcal{X}$ software package in the AMS pre-print style and to provide the article in this electronic form for typesetting. While this procedure may not reduce the interval between submission and publication of an article, generally much more accurate copy will be returned for proofreading. Production time for manuscripts prepared with other systems, even $\mathcal{T}\mathcal{E}\mathcal{X}$ itself without $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{T}\mathcal{E}\mathcal{X}$, currently prevents cost-effective use of the existing electronic form. Before sending an $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{T}\mathcal{E}\mathcal{X}$ manuscript for typesetting, contact the AMS Composition department for details.

Manuscripts prepared by some means other than $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{T}\mathcal{E}\mathcal{X}$ should be doubled-spaced and produced in the format used by the journal. For journal abbreviations, see the latest *Mathematical Reviews* volume index. An author should submit the original and two copies of the manuscript and retain one copy. The author may suggest an appropriate editor for his paper. It is recommended that the author acquaint himself with the pertinent material contained in "A Manual for Authors of Mathematical Papers," which is available from the American Mathematical Society. All contributions intended for publication and all books for review should be addressed to Walter Gautschi, Chairman, Editorial Committee, Mathematics of Computation, Department of Computer Sciences, Purdue University, West Lafayette, Indiana 47907. The date received, which is published with the final version of an accepted paper, is the date received in the office of the Chairman of the Editorial Committee, and it is the responsibility of the author to submit manuscripts directly to this office.

Each article submitted for publication must be accompanied by a brief and reasonably self-contained abstract, and by 1991 *Mathematics Subject Classification* numbers. If a list of key words and phrases is included, it will be printed as a footnote on the first page. A list of the classification numbers may be found in the 1990 Subject Index to *Mathematical Reviews*. Authors are also encouraged to supply electronic addresses when available. These will be printed after the postal address at the end of each article.

Copying and Reprinting

Individual readers of this publication, and nonprofit libraries acting for them, are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews provided the customary acknowledgment of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication (including abstracts) is permitted only under license from the American Mathematical Society. Requests for such permission should be addressed to the Manager of Editorial Services, American Mathematical Society, P.O. Box 6248, Providence, Rhode Island 02940-6248.

The appearance of the code on the first page of an article in this journal indicates the copyright owner's consent for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law, provided that the fee of \$1.00 plus \$.25 per page for each copy be paid directly to Copyright Clearance Center, Inc., 27 Congress Street, Salem, Massachusetts 01970. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotion purposes, for creating new collective works, or for resale.

MATHEMATICS OF COMPUTATION

TABLE OF CONTENTS

January 1991

James H. Bramble, Joseph E. Pasciak, and Jinchao Xu , The analysis of multigrid algorithms with nonnested spaces or noninherited quadratic forms	1
A. K. Aziz and J.-L. Liu , A Galerkin method for the forward-backward heat equation	35
Georges-Henri Cottet , Large-time behavior of deterministic particle approximations to the Navier-Stokes equations	45
T. Lin, J. Sochacki, R. Ewing, and J. George , Some grid refinement schemes for hyperbolic equations with piecewise constant coefficients	61
Robert Glassey and Jack Schaeffer , Convergence of a second-order scheme for semilinear hyperbolic equations in $2 + 1$ dimensions	87
I-Liang Chern , Large-time behavior of solutions of Lax-Friedrichs finite difference equations for hyperbolic systems of conservation laws ...	107
Kendall E. Atkinson and Ian H. Sloan , The numerical solution of first-kind logarithmic-kernel integral equations on smooth open arcs	119
Hideaki Kaneko and Yuesheng Xu , Degenerate kernel method for Hammerstein equations	141
P. P. B. Eggermont and Ch. Lubich , Uniform error estimates of operational quadrature methods for nonlinear convolution equations on the half-line	149
H. W. J. Lenferink , Contractivity-preserving implicit linear multistep methods	177
Claus Schneider , Rosenbrock-type methods adapted to differential-algebraic systems	201
Howard C. Elman and Gene H. Golub , Iterative methods for cyclically reduced non-self-adjoint linear systems. II	215
J. N. Lyness, T. Sørveik, and P. Keast , Notes on integration and integer sublattices	243
Shaun Disney and Ian H. Sloan , Error bounds for the method of good lattice points	257
B. C. Carlson , A table of elliptic integrals: One quadratic factor	267
G. Steidl and M. Tasche , A polynomial approach to fast algorithms for discrete Fourier-cosine and Fourier-sine transforms	281
Jürgen Eichenauer-Herrmann , Inversive congruential pseudorandom numbers avoid the planes	297
A. Ivić and H. J. J. te Riele , On the zeros of the error term for the mean square of $ \zeta(\frac{1}{2} + it) $	303
H. W. Lenstra Jr. , Finding isomorphisms between finite fields	329
L. N. Vaserstein , Sums of cubes in polynomial rings	349
