This special issue is based on the Hirnliga symposium entitled “Alzheimer’s disease: new perspectives on therapeutic targets and pathways” which was organized by the Goethe University of Frankfurt and held in Bad Homburg, Germany, August 25–27, 2011. This expert meeting was attended by over 60 participants with invited speakers from Taiwan, Israel, USA, Sweden, Switzerland, France, Poland, and Germany.

The success of this meeting was due to the generous support from Hirnliga e.V. and Goethe University of Frankfurt. A special note of appreciation is extended to the local organizers, Walter E. Muller and Gunter P. Eckert, and to the administrative and technical staff of the Department of Pharmacology, Biocenter, Goethe University, for their outstanding support that contributed to the overall success of the symposium.
