*Monatsh Chem 136*, 1013–1036

Concerning the definition of the intermediate cationic states (page 1023, Eq. (26)) the same letter symbols were printed for these new states as for the old states. Thus, care must be taken which states are meant in this part of the paper, especially in Eqs. (30), (34), (37), (43), (45), and (48).

In addition Eq. (31) should read:

$$\mathcal{E} = -[(1 - \alpha)^2 + \beta^2](1 - \delta)E - 2\beta t(1 - \alpha)E \tag{31}$$

And finally a factor 2 has been omitted and a wrong symbol has been used in Eq. (52); one must read:

$$E_0^U = \mathcal{E}_g + \mathrm{E}_u + \frac{U - \gamma_1}{1 - S^2}, \qquad E_1^U = \mathcal{E}_g + \mathcal{E}_u + \frac{C - \gamma_1}{1 - S^2} \tag{52}$$
