EDITORIAL

Happy New Year from *Organic & Biomolecular Chemistry*

DOI: 10.1039/c1ob90076e

On behalf of the *OBC* Editorial Board and Editorial Team, we welcome you to this first issue of 2012, *OBC*'s 10th year of publication

10 years of high quality research and service

Since 2003 *OBC* has built on its core values of high impact research, good author service and rigorous, fair and timely peer review to grow into one of the leading journals in the field. It's no surprise that just in the last four years the number of authors choosing to publish their research with *OBC* each year has more than doubled. We would like to thank all our authors, referees and readers for contributing to the success of the journal. As a result of this significant growth in high quality content, *OBC* has moved to weekly publication in 2012.

Associate Editors

Last year we were delighted to welcome two new Associate Editors to the *OBC* Editorial Board: **Jin-Quan Yu** (Scripps Institute, La Jolla, US) and **Andrei Yudin** (University of Toronto, Canada). *OBC* authors now have a choice of submission routes—to the Cambridge Editorial office or one of our Associate Editors—and full information about these is given in our author guidelines. As well as handling papers for the journal, our Associate Editors join the other members of the Editorial Board in ensuring the high standards of *OBC* are maintained through a prominent role in the peer review process.

Editorial Board changes

In 2011 we said goodbye to four long-serving members of the *OBC* Editorial

Board: Ben Davis, Stefan Matile, Brian Stoltz and Keisuke Suzuki. We would like to thank them for all of their work in their time with the journal and wish them all well for the future. In 2012 we will see new members appointed to the Board, and announcements will be made in due course.

Web theme issues

The success of *OBC* web themes continued in 2011. These web themes pull together online articles published in *OBC* on a particular topic, highlighting high-profile work in the area to the community. Topics covered in 2011 included Free-Radical Chemistry (in memory of Professor Athel Beckwith), Chemical Biology and Fluorine Chemistry. Look out for more web themes in *OBC* in 2012, with topics including Foldamers and Organocatalysis (in conjunction with *ChemComm*).

Meet the Editorial Team

Last year *OBC* Editorial Team members travelled to a number of international conferences, and our Editorial Board members represented the journal at many more. Travelling to conferences offers great opportunities for the *OBC* team to meet top scientists, see the latest research developments and discuss the journal with our authors, referees and readers. Look out for members of the *OBC* team at conferences throughout 2012. Amongst the conferences attended by a member of the Editorial Team was OMCOS 16 in Shanghai in July, where the 2011 *OBC* Lectureship was delivered by Dr Michael Willis (University of Oxford).

OBC is also keen to support young organic chemists by providing student poster prizes at selected conferences throughout

the year. If you are organising a conference in 2012 and would like us to consider supporting it with an *OBC* poster prize then please contact us.

We hope that you enjoy reading this first issue of 2012.

Professor Jeffrey Bode
Chair, Editorial Board

Dr Richard Kelly
Editor

RSC Publishing growth and successes

Journals from RSC Publishing are delivering impressive results on Impact Factors, growth in quality content and international visibility and influence. The 2010 Journal Citation Reports® proved that our quality is better than ever, and that is thanks to our authors and referees. Of the top 20 journals in the multidisciplinary chemistry category, 25% are from RSC Publishing. Plus 83% of our journals listed in this year's report have an IF above 3.

The number of articles published in our journals has almost doubled in just two years—and our share of the total has also nearly doubled in that time. More titles have recently joined our portfolio: *RSC Advances* and *Catalysis Science & Technology*. And *Chemical Science* received the ALPSP Award for Best New Journal 2011.

So more and more authors—from 70+ countries in 2011—are trusting us to ensure their research is communicated to the global community. Our Editorial and Advisory Boards are international, and our publishing operation is supported by offices in USA, China, India and Japan. Plus our content is downloaded by growing numbers of readers in virtually every country in the world.

These facts demonstrate that RSC journals are increasingly valued as a key resource for the very best research. www.rsc.org/journals

Books delivering the latest research advances, information, opinions and perspectives in modern science, confirm our reputation as one of the fastest and most dynamic publishers in the world.

In an age where content is key, we understand the importance of your online chemical science resource. The RSC eBook Collection now holds more than 1,000 books, equating to over 25,000 chapters, and spanning more than 40 years. The publication of our 1000th eBook in 2011 was a celebratory milestone.

We continue to provide expert, interdisciplinary chemical science books: over 100 new print titles are planned for 2012 alongside the launch of several new series including:

- Food and Nutritional Components in Focus
- New Developments in Mass Spectrometry
- New Developments in NMR
- RSC Smart Materials

Our ability to deliver fast, accurate information to our customers was rewarded by the BIC Basic Award, an accolade held by few publishers. www.rsc.org/books

RSC Publishing Platform

Access one million journal articles and book chapters in one simple integrated search.

The RSC Publishing Platform provides the most valued interface and features that connect you with the highest quality scientific research. With one single search box, students, academics, researchers, scientists and professionals can easily access our books, journals and databases. www.rsc.org/platform

To access content on the go, download our **RSC Mobile app** for your electronic device.

www.rsc.org/rscmobile

Free online access

Free online access is available to all our newest journals, and much more—all you need to do is register for an RSC Publishing Personal Account. Once logged in, you will be able to access **all** our free content including:

- All content of our newest journals for the first two volumes
- Any articles that are part of a special free access promotion (e.g. 'hot' papers, web theme issues, etc.)
- A sample chapter from each book in the *RSC eBook Collection*

With your username and password you can access free content any time, any place—all you need is internet access. You can also save searches and favourite articles. Register now at www.rsc.org/personalregistration

If your institution/organisation is a current customer or on a free trial with IP registered addresses, you will be able to access all free content automatically, if authenticated. To request free access

for your institution/organisation, go to www.rsc.org/freeaccess.

ChemSpider: the free chemical database

www.chemspider.com gives you the most comprehensive view of freely available chemical data from a single online search.

Search: over 26 million structures from 400+ sources

Discover: related information from RSC publications, Wikipedia, Google Scholar & PubMed

Share: add and curate data

Access ChemSpider anytime, anyplace, anywhere with the **free** ChemSpider mobile app, www.rsc.org/ChemSpidermobile

ChemSpider SyntheticPages is a freely available interactive database of synthetic chemistry. It contains practical and reliable organic, organometallic and inorganic chemical syntheses, reactions and procedures deposited by synthetic chemists. Synthetic methods on the site are updated continuously by chemists working in academic and industrial research laboratories. ChemSpider SyntheticPages encourages submissions from graduate students, postdocs, industrialists and academics.

Discover ChemSpider SyntheticPages today: <http://cssp.chemspider.com>

RSC Conferences and Events 2012

The RSC organises a broad range of conferences and events to promote the advancement of the chemical sciences. Please visit the website for the most up to date listing: www.rsc.org/events

The major scientific meetings planned for 2012 include:

Challenges in Organic Chemistry and Chemical Biology (ISACS7)

12–15 June 2012, Edinburgh, UK
www.rsc.org/isacs7

21st IUPAC International Conference on Physical Organic Chemistry (ICPOC 21)

9–13 September 2012, Durham, UK
www.rsc.org/ICPOC21

Directing Biosynthesis III (DBIII)

19–21 September 2012, Nottingham, UK
www.rsc.org/DBIII
