

Welcome to the 10th anniversary issue of *Organic & Biomolecular Chemistry*

DOI: 10.1039/c2ob90091b

Organic & Biomolecular Chemistry (*OBC*) was launched in 2003 as a broad scope journal for core organic chemists and those working at the interfaces with Biology, Medicine and Materials Science. Showcasing research in both established topics such as synthetic, physical organic and supramolecular chemistry and also emerging areas such as chemical biology and nanotechnology, *OBC* quickly developed into a venue for high impact, excit-

ing research from across the broad scope of organic chemistry.

Now in its 10th year *OBC* has developed into one of the leading journals in the field, with the number of authors choosing to publish their research in *OBC* growing significantly each year. 10 years on *OBC*'s core values remain the same: high impact research, good author service and rigorous, fair and timely peer review.

To celebrate *OBC*'s 10th year we are publishing this anniversary themed issue, which brings together 68 research and review articles from the breadth of *OBC*'s scope by leaders in the field, some of whom have served on *OBC*'s Editorial or Advisory Boards. I would like to thank all authors who have contributed to this issue and I hope that you enjoy reading it.
