Zhongyi Wang, and Sammy C. Duncan****Influences of Catalyst Configuration and Catalyst Loading on Selectivities in Reactions of Diazoacetamides. Barrier to Equilibrium Between Diastereomeric Conformations.**

Pages 407–410. We reported that chiral dirhodium carboxamidate catalysts having a mirror image relationship produced different selectivities in reactions of both diazoacetamides **1** and **2** (BTMSM = (TMS)<sub>2</sub>CH) but not in reactions with **3**. In particular, enantioselectivities from intramolecular carbon–hydrogen insertion reactions differed with the configuration of the catalyst by as much as 22% (with **2**), and chemoselectivity/regioselectivity (with **1**) varied with catalyst configuration and with the substrate-to-catalyst ratio.

These results have been confirmed in extensive further studies with Rh<sub>2</sub>(4*S*-MEOX)<sub>4</sub> and Rh<sub>2</sub>(4*R*-MEOX)<sub>4</sub> of certified purity. However, the previously reported explanation for these unexpected differences violates symmetry considerations, and a test of that explanation using a 50:50 mixture

of Rh<sub>2</sub>(4*S*-MEOX)<sub>4</sub> and Rh<sub>2</sub>(4*R*-MEOX)<sub>4</sub> with **2** gave a racemic C–H insertion product.

Thus, the results described in our publication have been confirmed, but they lack a viable explanation. Efforts are underway to more fully understand the origin of these differences.

Koehn****New Silyl Ether Reagents for the Absolute Stereochemical Determination of Secondary Alcohols.**

Page 1748. The Supporting Information published with the paper contained several errors. Page S1, line 2 of the text: “Dichlorodimethylsilane (180 mmol)” should be changed to “Dichlorodimethylsilane (180 μL)”. Pages S1 and S2, lines 10 and 4 of the text, respectively: The words “silica-face extraction cartridge” should be changed to “3 cm<sup>3</sup> silica gel solid-phase extraction cartridge”.
