

Additions and Corrections

1992, Volume 11

Peter Legzdins,* Everett C. Phillips, Steven J. Rettig, James Trotter,* John E. Veltheer, and Vivien C. Yee: Reactivity of $\text{Cp}^*\text{W}(\text{O})_2(\text{CH}_2\text{SiMe}_3)$ toward *p*-Tolyl Isocyanate: Cycloaddition Reactions of Tungsten-Oxo and -Imido Linkages.

Page 3104. Two other ureato complexes formed by trapping of a metal-imido linkage with an isocyanate molecule have been previously characterized crystallographically by Wilkinson, Hursthouse, and their co-workers (*J. Chem. Soc., Dalton Trans.* 1991, 2791). This work constitutes but a part of their extensive investigations with NR complexes.
