1996, Volume 15

Sven-Eric Eigemann, Walter Förtsch, Frank Hampel, and Rainer Schobert*: Novel Synthesis of (Butatriene)hexacarbonyldiiron Complexes. Stereochemical Aspects and an X-ray Crystal Structure Determination.

Page 1511. In this paper, we stated that we were reporting a novel synthesis for (butatriene)hexacarbonyldiiron complexes **1** from 2-butyne-1,4-diols **2** and enneacarbonyldiiron. We are sorry to say that we failed to notice an article by Victor¹ in our literature searches. Victor reported the synthesis of **1** from **2** and dodecacarbonyltriiron.
