## *Editor's Page*

---

As of January 1, 2006, we will require all manuscript submissions to be made electronically via the Paragon system. Paper copy submissions will no longer be accepted. With this change, *Organometallics* joins many other ACS journals that have already gone over to mandatory online manuscript submission.

Instructions for online submission can be found at <http://paragon.acs.org>.

At the same time, we will require the submission of CIF files for all crystal structure determinations. Since they can be generated from the CIF data, the usual tables of atomic coordinates, complete bond distances and angles, hydrogen atom coordinates, etc. should no longer be submitted as part of the Supporting Information. Note that CIF data must be submitted in the text-only form that is generated by the relevant crystallographic software. CIFs that are word-processed or converted to PDF format are not useful and will not be accepted. Paragon features a CIF option in its File Type selections, and the data must be given the CIF File Type when it is uploaded (not "text" or "other"). Improperly submitted Supporting Information results in delayed processing while the errors are corrected.

In addition, since it would be helpful to the editors, the submitting authors are required to provide the names and e-mail addresses of at least four chemists whose acquaintance with and expertise in the field of research in question would qualify them to serve as reviewers of the manuscript. This and all other information that the Paragon system requires must be provided before the manuscript is forwarded to the Associate Editors.
