

ANNOUNCEMENT

Call for Papers

Protracted Effects of Perinatal Drug Dependence Satellite Meeting of the Committee on Problems of Drug Dependence

Time: 9:00–12:00 A.M. Date: June 7, 1979
Place: Holiday Inn, Center City, Philadelphia, PA

The program will consist of short presentations concerning long-term effects of exposure to drugs of abuse in the developing organism and will provide a multidisciplinary perspective of this emerging problem. Papers describing original data dealing with problems of morphological and behavioral teratology as consequences of exposure to drugs and/or alcohol are invited. If there are enough papers, we will extend the presentations to include an afternoon session on these topics.

Presentations will be 10–15 minutes in length, followed by a 5-minute question and answer period. Deadline for submission of abstracts is May 1st. Accepted papers will be published as a special supplement to *Pharmacology Biochemistry and Behavior*. (John Rosecrans will be co-editor of this publication.) To be included in the publication, manuscripts must be submitted at the time of the meeting on June 7th.

The format to be followed in preparing abstracts and manuscripts is that used by *Pharmacology Biochemistry and Behavior*. A preliminary program will be sent to participants by May 15th.
