

equal to the halfe of PAV , or of pAv ; nor yet qp equal to the halfe of qy , nor qpA to the halfe of qyA ; (*the Triangle qyA will be equal to the Sector LCA (because $ALpy$ is common to both;) and like to the Triangle GCA , and a part of it;* which he thought to have been impossible.

Note

WHat in N^o. 54. p. 1077. in the *Answ. to Qu. 1.* is said of the Observation of *Briners*, is to be understood, that the Workmen *think* so, that they make more Salt with the same quantity of brine, at the Full Moon, then at other times, though really they do not, as the Answerer Judgeth by his *Observ.* in N^o. 53. p. 1064: Who hath since advertis'd, that 'tis possible at times, when the Pit hath been much drawn first, that then, if without intermission they go on *walling* till the *Full*, they may make at that time more Salt, than at another time, it being well known, that much drawing the Pit, strengthens the Brine.
