(1022)

equal to the halfe of PAV, or of pAv; nor yet q p equal to the halfe of qy, nor qpA to the halfe of qy A; (the Triangle qy A will be equal to the Sector LCA (because ALpy is common to both;) and like to the Triangle GCA, and a part of it; which he thought to have been impossible.

Note

Hat in N°. 54 p. 1077. in the Answ. to Qu. 1. is said of the Observation of Briners, is to be understood, that the Workmen think so, that they make more Salt with the same quantity of brine, at the Ful Moon, then at other times, though really they do not, as the Answerer Judgeth by his observe. in N°. 53. p. 1064: Who hath since advertis'd, that 'tis possible at times, when the Pit hath been much drawn first, that then, if without intermission they go on walling till the Full, they may make at that time more Salt, than at another time, it being well known, that much drawing the Pit, strengthens the Brine.
