

tis manifest that there is a motion of the heart and blood, and yet the respiration suppressed: Where he desires it may be considerd with- all, that the Lungs once inspired doe more easily transmit the blood, than those that never had any commerce with the Air; as also, that since part of the blood in a *fetus* passeth through the Lungs collap- sed, without respiration; all the blood may more easily pass through the once inflated and expanded multitude of bladders, &c.

Errata in this Numb.

p. 665. l. 15. r. i o es et; p. 670. l. 6. r. hath not taken. ibid. l. 12. r. as it shews. ibid. l. 34. r. permanent.

Imprimatur,

Julii 18.
1676.
