IV An Abstract of a Letter from Mr. Samuel Dale, to Dr William Briggs, M. D. F. R. S. Concerning a Contumacious Jaundise, accompanied with a very odd case in Vision.

Braintree, Oct. the 27th. 1693.

SIR.

THAT you might not think me unmindful of my promise to you when you were at Braintree; I have here sent you the Account of my Patient Grace Dennis, of Braxsted Magna, in this County of Essex,

which you did defire of me.

About Christmas, Anno 1689. After much grief and trouble of Mind in the foregoing Autumn, the Jaundise began to appear upon her; for which, after having for about nine Months used many Medicines, which were told her by divers of her Friends and Acquaintance. but withnout Success: She in September, 1690, applyed her self to me, to whom I administred divers Medicines, famous in the most Celebrated Authors for the cure of the Faundise, and which I had often used with Success in the cure of that Disease, yet to her they were of no Benefit: After which she had the Advice of several Learned Physicians in the Countrey, and likewise of some in London; but all that could be done for her hath not yet had any Effect, for her Disease yet continues; and her Body which used to be plump and sleshy, is now become lean and emaciated, almost like a Skeleton, and her Appetite is little and depraved.

In May 1691. after an extraordinary Menstrual Flux for about three Months, she began as soon as the Sun was down, to be deprived of her Sight by degrees until it was quite dark; when altho never so big a fire or many candles were in the Room, yet could she not dis-

cern

cern the Object (except a finall shining of Light) and so she remained until the Morning as one Stone Blind, when by little and little, as the light encreased her sight returned, until the Sun arose, and then she recovered her

perfect Sight.

And in this Case she continued, until August 1692. when being returned from Epsom, where she had been drinking the Waters for about a Month, her sight returned to her again, so that she could see in the night persectly. Thus she continued until fanuary last, when an extraordinary Menstrual Flux again seizing her, her Nocturnal sight likewise lest her, and she became Blind again as formerly.

Last July she was seized with a Fever, when her sight again returned and continued for about a Month and then lest her as sormerly; so that now she hath her Nocturnal Blindness, and her Jaundise likewise con-

tinues.

Thus Sir, I have hereby troubled you with an exact Relation from time to time of matter of fact, and will leave the *Philosophical Solution* thereof, to be decided by the better Judgments of your self and others, in the mean time subscribe my felf,

Sir, Yours, &c.
