dity he found Two Years ago; viz. One Hundred and Fifty Pound Weight dashed on the Shoar at a Place in these Parts called Ambergriese Point, where the Spaniards usually come once a Year to look for it. This vast Quantity was divided in Two Parts; supposed by rolling and tumbling in the Sea; but that which I have to inform you, is the Way how 'tis produced; viz. from a Creature, as Honey or Silk; for I faw in fundry Places of this Body, the Beaks, Wings, and part of the Body of the Creature which I preserved some time by me, and this ignorant Fellow (for so you would term him if you knew all) has seen the Creature alive; and he adds. That he believes they swarm as Bees, on the Sea-Shore or in the Sea. This account is very different from what I ever met with, so I thought fit to Communicate it. We have lately discover'd Two hot Springs. Windward, which seems Sulphurous: The other to Leeward is very Salt; but as I am told does not partake of Brimstone, and both very much magnify'd for the Endemick Diseases of these Parts, the dry Bellyach, Pains of the Nerves, and Yaws.
