II. An Account of Mr Sam. Brown his Fifth Book
of East India Plants, with their Names, Ver-
tues, Description, &c. By James Petiver,
Apothecary and Fellow of the Royal Society.
To which are addcd some Animals sent him
from those parts.

These Plants were gathered at Salawacka and Keraputta
Kaadoo, about 30 Miles from Madras, among Stony
ground, Hills and Mountains, the colour of the Earth like rust
of Iron : there are some moist places, but the ground is gene-
rally dry and hard.

Collected from the 23d of July to the first of August 1696.

The Flowers of this Plant are Blue, and not of a pale yellow,
as Dr Pluknet asserts. The Decoction is good in Hectick Fe-
vers, Consumptions, &c. Which the Hort. Malab. confirms,
being boyl'd with Cummin.

181.

Pan-neer Maraum Malab

Arbor Salawaccensis Catappa Malabarica folio, flore extus fe-
riceo.

These Leaves are roundish, large, and broadest towards the
top, in shape very like the Katappers or Indian Almond menti-
oned by Nieuhof in his Itinerary : It is also very well described Tab. 3. p. 5.
and Figured in the Hort. Malab. Vol. 4. Tab. 3 and 4. p. 5. under
the Malabar name of Ada-maram or Saros.

The Flowers grow in Clusters Umbelwise, viz. several at the
end of a long pedicle.

U u u u u u

Is

Is about 8 or 10 foot high; thick as ones Arm. The *Section* of the Root, Leaves, Bark, &c. cures the Running of the Reins, and Sharpness of Urine. S. B.

Ray H. Pl. 1499. c. 22. Ray H. Pl. 1499. c. 22. Flor. Malab. 49. 3. id. fol. 12. 1. 6.

*F. Mal. 49. 3. I wonder, since Dr. Plukenet in his *Almagestum Botanicum**

id. fol. 13. 1. 6. Tab. 274. fig. 2. had given so good a Figure of this, yet when

he came to see it in this Collection, should so soon quite forget

*it, as appears in his *Mantissa* pag. 39. where he not only gives*

*it a New name, but falsly makes it the *Belutta Kanelli* of the*

5th Volume of the Hort. Malab. which is a different Plant.

This Tree is about 30 foot high, and about a foot diameter; The Fruit when ripe are dark purple almost black, as big as Grapes and taste like Sloes; they have a large Kernel or Core, which is not inclosed in a Shell, the taste of that is not pleasant,

sant, but harsh and bitter, therefore thrown away ; this Kernel is more than half the Fruit. The Bark of the Tree boyld and the Decoction drank cures all Fluxes, also the Dysentery and Gonorrhœa. This Fruit is good to eat, and all over this Coast by English and Portuguêsé are call'd Jambolins : I believe they are the same that *Garcias* 236. and *Parkinson* 1636. call by the same name. *Jangomas* I don't know, except it be the same with the *Mansanas*, viz. *Ber* and *Bor*. S. B.

N. B. The Jambolins of Garcias and Parkinson seem very different from this Tree.

185. *Peren-calla Malab.*

Kara *Salawaccensis* major, fol. longiore venoso.

an Ben. Kara *Malab.* Gali seu Babouli *Brach.* Espinho d'urso *Lusit.* Aapel dorn *Belg.* Hort. *Malab.* V. 5. T. 35. p. 69. Baccifera *Indica* floribus spicatis, fructu rotundo nigricante, polyspermo Ray H. Pl. 1494. c. xi. Fl. *Mal.* 47. 3. Fol. 12. 2. 5.

This differs from S. B. 62. in having its Leaves much larger, and sharp-pointed, some as big as Bay-leaves and as broad.

This is a bigger sort of S. B. 62. Its Vertue the same with that ; The Fruit of this is a pleasent acid taste, makes good sweet Meat and Gelly, altogether as good as *Currans*, they are of a fine Red when half ripe, and Black when full ripe : The Natives eat these greedily, but I cannot hear they use them in Physick : The Natives commonly call the Fruit Callacca. Some count *Pecala* S. B. 161. a Species of this. S. B.

186. *Shala-maraum Malab.*

Rus trifoliata facie Frutex *Salawaceensis* floribus Juliformibus *Muf. Petiver.* 678. an *Molago maram Malab.* Mirisato *Brach.* Arbore da pimiento falso *Lusit.* Wild Peeper boom *Belg.* Fl. *Mal.* V. 5. Fig. 25. p. 49. This is the *Tamarind Tree*, whose Fruit is well known : it's a large Tree 40 or 50 foot high, and about 2 foot diameter. The Natives with the fume of the powder of the Root cures Piles and old Ulcers, the skin or rind of the Seed in powder is a most excellent Remedy in a Gonorrhœa after purgation ; it also stops all sorts of Fluxes, and in Dysenteries infallible. A Decoction of the Leaves cleanses and heals green Wounds and Ulcers ; the Juice of the Leaves cures inflammations of the Eyes and Ophthalmias ; the Fruit is well known to temper the heat of the Blood, with the Leaves, which the Natives use in all their Diet. S. B.

H. Mal. v. 11. H. Mal. 240. 7. id. Fol. 60. 2. 27.

P. 64. Fl. Mal. 240. 7. id Fol. 60. 2. 27. This is a Water Plant, when fresh in a minutes time after 'tis chewed, bites the tongue and mouth: A Decoction of this presently cures Fevers, Coughs, Astma's, Hecticks and Consumptions, they generally add to it a few grains of Pepper, the Flower is white, consists of 4 small Leaves. Grows in Ponds and Wells, and is not fixt to the ground at bottom by any stalk that I could find. S. B.

It seems to be a Plant, swimming or floating on the Water, as the Hort. *Malab.* and *Veflingius* observes theirs to do, it may therefore be easily carried by the Wind or Current from one side of a Pond to the other, like our Duck-meat.

214. Nommenau maram *Malab.*

S. B. 214. Grows about 30 foot high, and 8 or 10 inches diameter. The Natives beat the Root, Leaves, Flowers, Bark and Fruit, and press out the Juice, which they boyl in Butter, and give a spoonful of it for Hectick, Consumptions and Cough, with success; these people think Butter helps the Virtue of Physick, Water not. The Flower is a complication of many threads on a stalk, which soon fall off. S. B.

This pod exactly resembles the *Waga Madraspatan*, *Senæ foliis* *silique lata compressa ubi seminibus inflata* Mus. Petiver. 697. and Mr Browns description of the Flowers exactly agrees with it,

it, which makes me believe it the same; and if so, these *Walnut*-like *Leaves* must belong to another Tree. However, Dr Plukenet affirms them one, which if he can shew contiguous, I should be glad to see, viz. its *Leaves* with either *Flower* or *Pod* on the same Branch.

220. Parpauticum Malab.

Spergula Rosea multicaulis polyanthos e Madraspatan.
an Alfine Madraspat. Gallii foliis, flosculis communi pediculoter-
nis Pluk. Tab. 128. Fig. 3. Alm. Bot. 21. 6. Dr Plukenet, to
shew his fondness in multiplying species, will have this a New
Plant, and to differ from the above-mentioned of his, because its
stalk forsooth has changed colour, and he fancies this grows
*propt up, and therefore in his *Mantissa* p. 9. he thinks himself*
obliged to give it the 2 following names, that it may be known
*from his other, viz. *Alfine Saxifraga Indie Orientalis*, fo-*
*liolis circa caulem radiatis, flore herbido & muscofo; seu *Al-**
fine Spergula muscosa Indie Orientalis, surrecta caulinibus
albicantibus. What colour the Stalks of his first were he men-
tions not, but in these I am sure he is miſtaken, for they are yellow,
not whitish, and therefore it may probably be still the same as
at first; and as for its growing surrect, (which signifies but
raised, set or lifted upright) I fee no difference between them;
besides, it's hard to judge by a dry specimen whether it grew
along the ground, or was lifted up; but grant this nice posture
should make it distinct, I presume ſo ſmall a peculiarity might not
require ſo long a title, but be diſtinguiſht in fewer than 20
words, and those none of the ſhortest.

The Decoction is an excellent Medicine in *Hædick Fevers* and *Consumptions*, the Powder mixt with equal weight of *Sugar*, and taken a dram at a time, cures the *Cough* and *Aſtma* in a short space. S. B.

225. Chedde Cootan Malab.
Althea Unaneercoondica floribus parvis ex alis foliorum dense
stipatis.

Dr Plukenet in his Mantissa makes this a Tree Betony; and if so, it's the only one I ever yet saw of 2 foot high that was not verticillated, but bore its cluster of Flowers on one pedicle, distant from the Stalk.

It grows in very hard ground, 2 foot high; the Decoction of this cures a Gonorrhœa when the Urine does not scald. S. B.

226. Cootan Malab.

Cuscuta baccifera Salawaccenfis fructu coronato.

25. 2. 17.

This I don't know what to term, it has no Root on the ground, but draws its nourishment from hair-like Roots, here and there inserted in the branches of the Trees it lies on; ground with Butter-milk, and a small Cup of it taken night and morning cures the violent scalding of Urine and Gonorrhœa. S. B.

We

We now proceed to the ANIMALS which I have received from several parts of INDIA, viz.

1. **S** Tella Chinensis perelegans, dupliciter radiata. Gazophylac. s. B. 5. 1.
nosc. Naturæ Tab. 4. Fig. 6. Gaz. nosc. Nat. Tab. 4. Fig. 6.

This has 13 round joyned rays, near 3 inches long, not bigger than a Packthread; these on the under part are thick set with a hairy fringe, between each of these larger *radii* comes another much smaller, smooth, about an inch long, and not bigger than a pin. This and the next Mr Sam. Brown some time since procur'd me from China.

2. *Stella Chinensis tetradactylon, capite pulchre venoso.*

This has but 4 rays, which are like the last but shorter, viz. about 2 inches long, the head an inch broad, round, flat, and finely veined with reddish and white.

3. *Papilio Indiæ Orientalis permaximus nigrescens, micis cæruleis aspersis, subtus rubedine notatus.* s. B. 5. 3.

This is the largest *Butterfly* I have yet seen, being full 6 inches between the tip of each Wing. I take this and the next to be Male and Female.

4. *Papilio Ind. Orient permaximus, e nigredine alboque mixtus, humero rubro pernotato.* s. B. 5. 4.

This differs from the last, only in having a share of white on both sides its upper wings, and the Scarlet spot on the Shoulders are in this seen as well above as underneath. My curious Friend Dr William Sherard first gave me these Butterflies, I have since met with them in Mr Goff's Collection.

5. *Papilio Javanicus, subtus flavescens, venis nigris maculis miniaceis marginatus.* First brought me from Batavia by Mr James Cuninghame, since which my worthy Friend Mr Edward Bulkley sent it me from Fort St George. s. B. 5. 5.

6. *Papilio Madraspat, medius, e flaveline & fusco mixtus, litura cerulea insignitus.* Gazoph. nosc. Natur. Tab. 4. Fig. 5. s. B. 5. 6.

This is a singular Fly, partly composed of yellow and brown, with a blue spot near the middle of each lower Wing towards the Shoulder.

7. *Papilio Ind. Orient. nigrescens, maculis pallidis umbræ cærulecente aspersis.* s. B. 5. 7.

8. *Papilio Ind. Orient. fascia major, ceruleo notatus, subtus navinus, bimaculatus.* s. B. 5. 8.

Y y y y y

9. *Papi.*

S. B. 5. 9. 9. *Papilio Ind. Orient. medius, cerulescentibus maculis, subtus nevinus.*

These 3 last came in *Mr Goff's Collections*, and they are the only ones I have as yet seen.

S. B. 5. 10. 10. *Papilio Malaccensis fuscus, subtus nevinus, margine ocultato.* Mr James Cuninghame caught this July 4. A. D. 1700. near Pulo Saya beyond Banca. I met with it also amongst Mr Goff's Insects.

S. B. 5. 11. 11. *Phalena Ind. Orient. minor fusca, maculis ex albo-carinatissime variantibus.*

S. B. 5. 12. 12. *Gaz. n. Nat. Tab. 3. Fig. 3.* *Phalena Ind. Orient. minor albicans, guttulis sanguineis & nigris pulchre aspersis.* Gazoph. noſt. Naturæ Tab. 3. Fig. 3.

I am also beholden to Mr Goff for these 2 beautiful Flies; I remember to have seen this last amongst Mr Charlton's most Curious Collection of Insects.

S. B. 5. 13. 13. *Buccinum Bengalense an fluviatile ovale, columella tridentata, ore angusto*

Litt. Hist. Conch. Lib. 1. Tab. 32. Fig. 30. This seems pretty well to resemble the *Buccinum quatuor orbum valde crassum & ponderosum 2 dentibus ad columella, ore admodum longo & angusto* Litt. Hist. Conchyl. Lib. 1. Tab. 32. Fig. 30.

I first receiv'd this from the Bay of Bengale, and since that from Batavia.

S. B. 5. 14. 14. *Nerita Javanica nigrescens monogyros.* an *Litt. Hist. Conch. Lib. 2. Tab. 143. Fig. 37.* This very well resembles Dr Lister's Figure, and seems to be a River shell.

S. B. 5. 15. 15. *Mytilus Malaccensis, striis crassis verrucosis.* an *Pettun. Litt. H. C. 13. Tab. 241. Fig. 73.* *culus striis magnis & muricatis donatus* Litt. Hist. Conch. L. 3. Tab. 241. Fig. 78.

The largest of these I have yet met with exceed not Dr Lister's Figure, viz. 1 inch $\frac{3}{4}$ long, of which the long notch hinge takes up 1 and $\frac{1}{4}$, it's just one inch over. I have had this Shell from Malacca, Batavia and Emuy; Mr Colvill, Surgeon, hath also lately brought it me from Pulo Verara.

S. B. 5. 16. 16. *Tridacna Ind. Oriental. ponderosissima & crassa imbricata.* an *Tridachnes Aldr. Bon. Test. 446 & 7. Fig. id. Franc. 152. Tab. xi. Fig. 2, 3. Concha Tridachnes Jonst. Amst. Test. Tab. 13. Concha maximam marmorea imbricata Col. Obj. aq 9. c. 14. Fig. 12. The great waved Muscle Mus: Reg. Soc. 14 7. 3.* For Bulk, Weight and Thicknells it's the largest Shell I ever saw. Mr Charlton has a pair of these, which weigh near a hundred.

p. 147. 3. lin. xi. Jonst. Amst. aq ex. Tab. 13.

dred pounds. My Curious Friend Mr *Sylvanus Landon* brought me one of them from the *East Indies*.

Aldrovand says it's call'd *Tridacna*, because the Fish is not to be eat under less than 3 mouthfuls, it has indeed but a small cavity, considering the largeness of the Shell.

17.. *Tridacna Indic Orient. triquetra, crassa, striata. Con-*
cha Indica Bonan. 109. Fig. 81, 82. Pectunculus major variegat-
us, profundo sinu conspicuus List. H. Conch. L. 3. Fig. 187 & 8. L. 3. Fig. 187.
Tab. 349 & 50. The Figures of the whole Shell in these 2 Au-
thors are too stiffly represented, but the single Valve pretty well so.
resembles it. Each large ridge is streakt with red, between which
*are always 2 smaller. The foresaid Mr *Landon* brought me*
this from the Island of Princes.

18. *Balanus Chinensis cristatus, Gazophyl. noſt. Naturæ Tab. 8. B. 5. 18.*
6. Fig. 10. Rond. *aq. 28.*

an *Balanus Rondelet. aq. 28. c. 29. Fig. Balanus marina Jonſt. c. 29. Fig. 1d.*
Amſt. aq. Tab. 15. Fig. 12. Glans de Mer Rond. aq. Gall. 21. C. Fig.
25. Fig. The first I everſaw Mr *James Cunningham* brought from Jonſt. *Amſt.*
China, and gave it to our worthy Friend Dr Grey, ſince which he aq. Tab. 15.
hath ſent it me from Chufan, an Illand near Liampo in China. Fig. 12.

19. *Cochlea Ind. Orient. cinerea, lineis subrufis undatis.* an *S. B. 5. 19.*
Cochlea albida crebris lineis subrufis transversim & undatim duobus List. H. C. l. 4.
depicta List. H. C. l. 4. S. 5. Tab. 559. Fig. 1. *s. 5. Tab. 559.*

My worthy Friend Mr *Walter Keir, Surgeon*, observed this *Fig. 1.*
elegant Shell on the Coasts of India towards *China*.

20. *Cochlea Bengaleñsis alba, punctis fuscis.* an *Cochlea claviflora compresa, punctis rufis dense depicta List. H. C. l. 4. S. 5.* *s. B. 5. 20.*
Tab. 564. Fig. 11.

I first received this from *Bengale*, and ſince from *Malacca, Pullo Verara and Emuy*.

21. *Cochlea Emuyaca, orbibus elatis, pulchre granulosis.* an *Cochlea striata & muricata List. H. C. l. 4. S. 5. Tab. 575* *s. B. 5. 21.*

The *fascia* of theſe are flat and ſmaller, granulated then the next.

22. *Cochlea Emuyaca granulosa, ore ferrato.*

This is properly diſtinguiſht from others by its ferrated mouth, which ſtanding below the upper edge makes it ſeem a double Shell. Mr *James Cunningham, Surgeon*, obſerved this and the laſt on the *Island Emuy* on the Coaſt of *China*.

23. *Cochlea Malaccensis fasciis maculatis elatis.* *s. B. 5. 23.*
an *Cochlea subviridis maculosa, striata, umbilicata List. H. C. l. 4.* *List. H. C. l. 4.*
4. S. 5. Tab. 586. Fig. 45. *s. 5. Tab. 586.*

Y y y y y y 2

This

This Shell hath a small Navel, the inside Pearly, its *fasciae* are thick set, spotted, and in some finely striated crossways, they are alternately big and less. Mr Charles Perry, Surgeon, brought me these amongst a Collection he made me in the East-Indies. I have observed one much larger from Malacca.

S. B. 5. 24

G. Z. n. Nat.

Tab. 4. Fig. 10.

24. *Cochlea Bengalensis* ore lacerato, capite sinuoso. *Gazoph.* noft. *Nat.* Tab. 4. Fig. 10. an *Cochlea compressa fusca, fasciata, brevior, sinu longo ad rostrum notabili* Lift. H. C. L. 4. S. 5. Tab. 577. Fig. 32. an *Bonan.* 167. Fig. 285.

This is very remarkable for its ragged mouth and notch in the head. Mr Stocker brought me this from the Bay of Bengale, with a few other uncommon Shells.

Tab. xi. Fig. d. and u. Bon. 116. Fig. 27 and 8. where it is ele 8. Mus. Regal. Soc. 5
gantly express.

This is a very curious Shell, and as singular for its flatness as the last was for its length; I have them from several parts of India.

32. *Trochus Micowaiicus granulosus, ex rubro late undatus.* s. B. 5. 32.
an *Trochus pyramidalis brevior, ex rubro undatum virgatus, cæ. List. H. C. I. 4.*
terum subcæruleus, striis majusculis nodosis valde asper. List. H. s. 8. Tab. 632.
C. I. 4. S. 8. Tab. 632. Fig. 19. Fig. 19.

This has a granulated superficies, no bigger than Poppy seed, it's equally waved with red and greenish, its base hollow, an inch over, and its height much the same. Mr *Charles Dell* first brought me this from the *Island Micowabi*, and I have since received it from *Batavia*.

33. *Concha Veneris Michowaica, typis quasi Hebraicis delineata. Concha Veneris ponderosa, longiuscula & angustior, ven-* s. B. 5. 33.
tre subplano albicante, lateribus crebris maculis nigricantibus iij. f. 9. Tab. 652. List. H. C. I. 4.
que mediocribus distinctis, dorso velut characteribus quibusdam Fig. 3
depicta List. H. C. I. 4. Sect. 9. Tab. 658. Fig. 3. the Hebrew Cowrie.

I have received this from *Micowabi*, *Pulo Verara*, *Fort St George*, and other places in the *East Indies*; Mr *Barckley*, *Surgeon*, brought it me also from *Madagascar*. These Shells differ very much, both in respect to their magnitude and colour, some being

being clouded with dark *Fasciae*, others have a pale list the length of the Shell on one side, with whitish spots intersperst amongst the Characters. The length of the largest I have met with has been 4 inches, and 2 the least.

S. B. 5. 34. 34. *Concha Veneris* *Madagascar albescens, oblonga, lineolis punctata, extremitatibus croceis.* *Concha Veneris cinerea, venter candido, ueroque capite croceo, dorso nigris lineolis & punctulis depicta* List. H. C. 1. 4. S. 9. Tab. 660. Fig. 4.

Mr Sylvanus Landon brought me this first from the *Island of Princes*, and *Mr Edward Bulkley* hath since sent it me from *Fort St George*; but our worthy Patron *Dr Lister* hath long since had them from *Madagascar* and the *Mauritius's*:

S. B. 5. 35. 35. *Concha Veneris Emuyaca albidu minor, levis, circulo croceo* *Gazoph. soft. Nat. Tab. 6. Fig. 8. Concha Veneris* 4. Rond. Tab. 6. Fig. 8. *aquatil. 102. c. 37. Fig. id Gallic. 68. Fig. c. 31. Aldr. Bon. Test. Rond. ag. 103. 555. Fig. id Francof. 181. Tab. 17. Fig. 16. descript. p. 183. col. 1. Gall. 68. Fig. c. lin. 41.*

31. Aldr. Bon: This differs from the *Guinea Gowrie* Mus. noſt. 19. in being *Test. 555. Fig. id* smooth, and having a laſtron circle. The references therefore to *Fr. 181. Tab. 17. Fig. 16.* *Rendeletius* (whose *Figure* and *description* agrees very well with this) ought there to be left out, for I had not then seen this *desc. 183. col. 1. 1. 41.*

Mus. Petiv. 19. 36. *Perficus Batavicus minor quin-dentibus dextris.* an *Buccinum* *Pericum parvum, sublividum, leviter ex fusco fauciatum*

S. B. 5. 36. List. H. C. 1. 4. S. xi. Tab. 803. Fig. 11. *Lift. H. C. 1. 4. S. xi. Tab. 803. Fig. 11.*

This agrees with Dr Lister's Figure in shape and bigness.

37. *Buccinum Emuyacum parvum, fasciis striatis & nodosis.*

S. B. 5. 37. These are about an inch and $\frac{1}{2}$ long, and $\frac{3}{4}$ broad, some of these have Teeth deep within the Mouth, others on the Lips, and some none at all.

S. B. 5. 38. 38. *Murex Orientalis, aculeis plurimis longissimis.*

150. Fig. 269. Sconcilio spinosa *Neapolitanis.* 150. Fig. 269.

Columna's Figure (most particularly) and the rest, give that resemblance of the Shell, that is not easily to be exprest in words.

I have had this elegant Shell from 2 or 3 places in the *East Indies*, viz. *Malacca, Pulo Verara, &c.*

39. *Oxyrynchus Batavicus castaneus, fasciis albis, columella dentata.*

This is an inch and $\frac{1}{2}$ long and $\frac{1}{8}$ inch thick, of a Chestnut colour, with three white girdles in the middle part, each end is pointed, and the columella or right lip is furrowed, its mouth $\frac{3}{4}$ long, and not a $\frac{1}{4}$ wide.

40. *Murex Micowaicus rostro canulato fasciatus, plicis elatis rugosis.* an *Buccinum rostratum labro duplicato, ipso ore exiguo.* S. B. 5. 40. List. H. C. I. 4. rotundo, senis plicaturis striatis descriptum List. H. C. I. 4. Sect. FIG. 43. 14. Tab. 948. Fig. 43.

Mr Charles Dell brought me this first from *Micowabi*, and Mr Edward Bulkley hath since sent it me from *Fort St George.*

41. *Bu-cochlea Micowaica, umbilicata, maculis subflavis, gyris alte incisis.* S. B. 5. 41. 14. Tab. 948. Fig. 43.

42. *Unicornu Bengalese, cancellatum, ore rotundo.*

About 2 inches long, and at the head one broad, it's composed of about 8 twirls, which are lattic'd, i. e. both striated and fasciated.

I have receiv'd this both from *Bengale* and *Batavia.*
