

standing Waters. In a small breeding Pond nigh my House, where I had formerly plenty of small Carp and Tench every Year, and of late scarce any young Breed to be met with, my Gardener not long ago observed one of the *Squilla*, with a Carp in its Mouth almost as large as itself; and has since observed these Insects hunting amongst the Weeds, and vigorously pursuing the small Fry. I order'd the Gardener to catch some of these Insects, and bring them home alive, with some of the smallest Fish he could meet with. We put them together in a large Bason of Water. The Insects were so rapacious, that they fell upon the Fish immediately, and destroy'd several in my Sight; and before Morning had devoured all that were in the Bason.

North-Eierley,
Sept. 5, 1733.

A N N O T A T A.

1. Circulus in Tabulâ annexâ delineatus refert imaginem ſolis, ea magnitudine, qua in helioſcopii fundo fuit depicta.

2. Lumen ſolis, prope lunæ orbem, quod nunquam non in aliis Eclipſibus ſolaribus tam prope horizontem, quam ſub majore altitudine viſis vehementi motu & undulatione gaudere animadverti, in hoc deliquio quietum proſus & tranquillum fuit.

3. Orbis lunæ, in primis quoad partem occidentalem, in phaſibus paulo ante Solis occaſum notatis, aſperitatem manifeſtam, omnibus hujus phaenomeni ſpectatoribus, prodidit; erant tamen intervalla, quibus ju-

ga montium lunarium distinguebantur, nec lata admodum nec profunda. Adhibita scala subtiliter divisa, æstimavi profunditatem unius vallis $\frac{1}{200}$ five partem ducentesimam diametri lunæ.

4. Ultimæ phases decrescentes per tenues nubes visæ fuerunt, neque tamen ultra undecim disci solis uncias nobis luna occultavit.

5. Centri solis occasus pro horizonte Vitembergensi calculo tum fuerat repertus, $7^h. 39^m. 49^s$. adeoque refractione radiorum in nubibus horizontis prope modum sex minutis fuit retardatus.
