

be seen, or laid hold of. He rode with the Piece of Lath in him from *Kick's End*, where the thing was done, to *Barnet*, which is above a Mile, to the House of Mr. *Justinian Morfe*, a Surgeon there, who extracted it with Difficulty; it sticking so hard, that others had been baffled in attempting to extract it. *Roberts* continued dangerously ill a long time; but at last, by the Blessing of God, and the Care of Mr. *Morfe*, recover'd intirely, and has the Sight of the Eye, and the Use of the Muscles. But some time after he seem'd well, he told me, that, upon leaning down forward, he felt great Pains in his Head. The Piece is supposed to have pass'd behind the right Eye. I am,

S I R,

Lincolns-Inn, Nov. 10.
1748.

Your humble Servant,

Richard Haffel.

VII. *The Sun's Eclipse of July 14, 1748. observed at Marlborough House, with the twelve Foot refracting Telescope, fix'd as a Finder to the Tube of the great twelve Foot Reflector; by John Bevis M. D.*

Read Nov.

10. 1748. Apparent Time.

July

July 28. 12. 24. 30. The End.
27. 40. The *Penumbra* quite gone.

About the Middle of the Eclipse, the Moon's Diameter, perpendicular to the Equator, measur'd in a 5 Foot Telescope was $33' 50''$; perhaps $15''$ or $20''$ greater than it would have been found to be with a 12 Foot Tube.

J. Bevis.

I lately received the following Letter from a Person unknown to me.

S I R, *Luffawick near Thrapston Northamptonshire.*

I HAD the Pleasure to observe the Sun's Eclipse July last, which was as follows. The Beginning $9^h. 1'. 0''$. *a. m.* The End o. $5. 25. p. m.$ at $10^h. 32''$. $10'. a. m.$ $10^{\circ}. 18'$. were dark, which I take to be the greatest with us. These are apparent Times, from a well adjusted Clock (by a Meridian drawn *June 10*, on a Plate of Metal), and corrected to the Time of Observation.

Our Latitude is $52^{\circ}. 27'. 30''$. I hope by this, and future Observations, I shall be able to determine our Situation with respect to yours. I am,

S I R, &c.

Oct. 21. 1748.

Mark Day.
