METEOROLOGICAL JOURNAL,

KEPT BY THE ASSISTANT SECRETARY,

AT THE APARTMENTS OF THE

ROYAL SOCIETY,

BY ORDER OF

THE PRESIDENT AND COUNCIL.

${\bf OBSERVANDA.}$

Height of the Cistern of the Barometer above a Fixed Mark on Waterloo Bridge =83 feet	2½ ir
above the mean level of the Sea (presumed about) =95 feet.	
The External Thermometer is 2 feet higher than the Barometer Cistern.	
Height of the Receiver of the Rain Gauge above the Court of Somerset House =79 feet.	
The hours of observation are of Mean Time, the day beginning at Midnight.	
The Thermometers are graduated by Fahrenheit's Scale.	
The Barometer is divided into inches and decimals.

^{*} The Rain Gauge is, in every state of the weather, invariably examined every morning at 9 o'clock, and the result set down in the appropriate column; while, on the other hand, any sensible exhibition of rain is equally noticed under the Remarks on the Weather in the last column, independently of any reference to the indications of the Gauge. During the present month, the amount of rain appears to have been too small to become appreciable in the Rain Gauge employed.—J.H.
