In the published version of our paper, the expression for  $k_{ET}$  is incorrect (the left hand column of page 4). This equation should be

$$k_{ET} = (1/\tau_{\text{bilayer}} - 1/\tau_{\text{PVA}}),$$

where  $\tau_{\text{PVA}}$  and  $\tau_{\text{bilayer}}$  are the decay time of the bright exciton state in the PVA film sample and that in the bilayer structure, respectively.

It is noted that they are just typographical errors and that the calculations in the paper are based on the correct equation.
