PACS number(s): 64.60.Ht, 64.60.Cn, 05.70.Ce, 02.70.Ns, 99.10.+g

In Table II, the integration time step $\Delta t = 5 \times 10^{-4}$ should be 2×10^{-4} . In Figs. 5(a) and 5(b), the plots of density and pressure before hard-core extrapolation were given but they should be replaced with the figures below, which are the results after proper extrapolation. The values of density and pressure are different quantitatively but do not influence the conclusion.

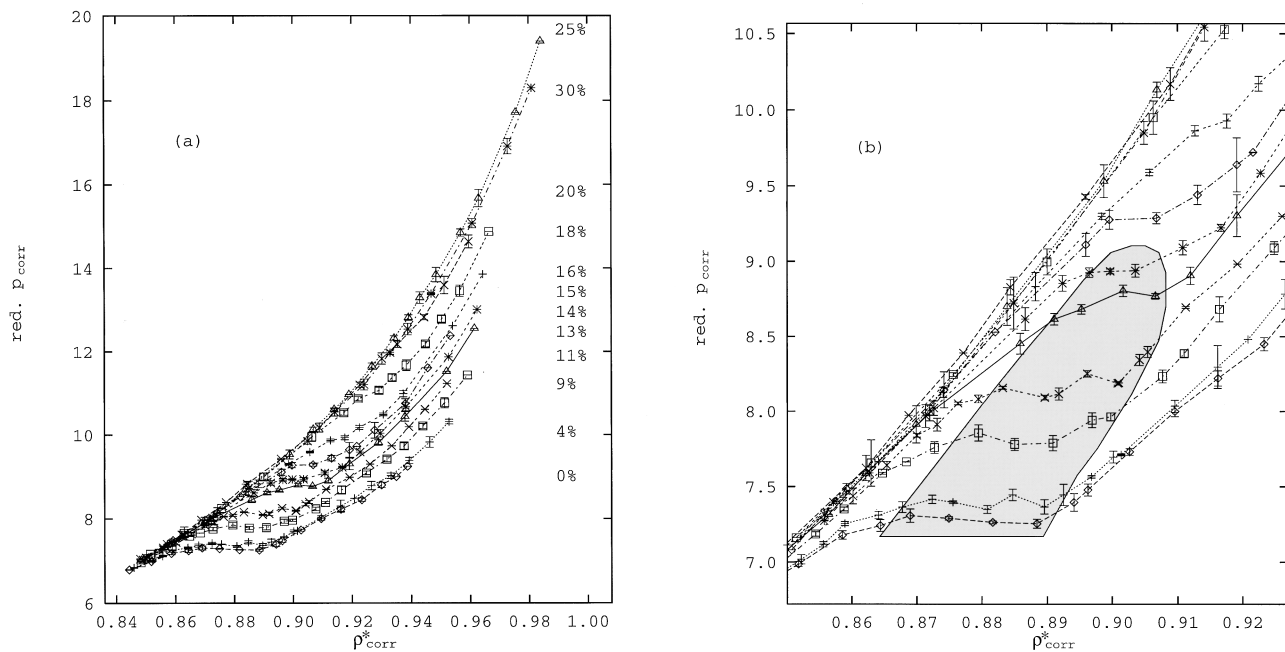

FIG. 5. (a) State diagram: reduced pressure versus density, both hard-core corrected for different bidispersities ($\delta r_b = 0\% - 30\%$, system L45). (b) Zoom of the plateau region in the state diagram of (a); the gray area points as a guide to the eye to the coexisting region.
