Figure 7 of our paper was intended to be reproduced in color, but appeared in black-and-white in error. The color rendition of Figure 7 is presented below.

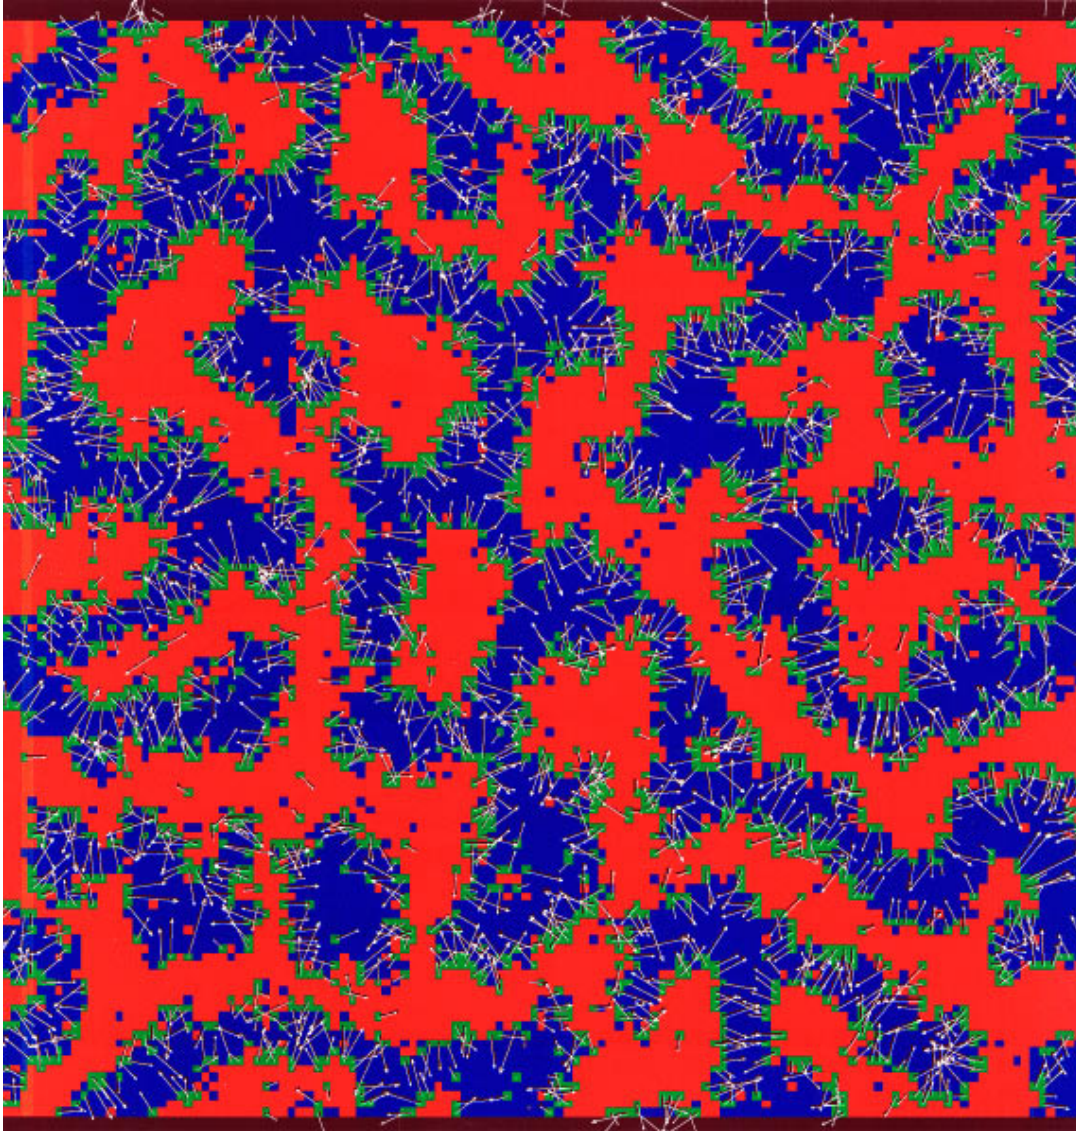

FIG. 7. (Color.) Bicontinuous microemulsion structure shown at time step 200 of a simulation with equal amounts of oil and water in the system. The arrows depict the direction of the amphiphile vectors: note that they always point from the oil to water domains, as we expect. Color code: blue, water; red, oil; green, surfactant.
