

**Erratum: Integral equation and simulation studies of the Heisenberg spin fluid
in an external magnetic field
[Phys. Rev. E 58, 3478 (1998)]**

F. Lado, E. Lomba, and J. J. Weis

[S1063-651X(99)07708-9]

PACS number(s): 61.20.Gy, 64.60.-i, 75.10.-b, 75.30.-m, 99.10.+g

Equation (38) should read

$$\chi_{zz}/\rho\beta\mu^2 = \sigma_x^2[1 + \rho\tilde{h}_{110}(0)] + \sigma_x\langle x \rangle[\rho\tilde{h}_{100}(0) + \rho\tilde{h}_{010}(0)] + \langle x \rangle^2[1 + \rho\tilde{h}_{000}(0)]. \quad (38)$$

Equation (42) should read [1]

$$\rho k_B T K_T = 1 + \rho\tilde{h}_{000}(0). \quad (42)$$

These corrections result in the following numerical values, which replace those in Table I.

TABLE I. Magnetic and thermodynamic properties of the Heisenberg spin fluid for $\kappa=1$ and $\rho\sigma^3=0.7$ calculated in the RZH approximation; the values of χ_{yy} at zero field for $K>K_c$ correspond to the last converged solution. The MC value in parentheses is a rough estimate since, due to the vicinity of the critical point, the results at this temperature are particularly sensitive to system size.

K	$\beta\mu B_0=0$		$\beta\mu B_0=1$	
	$\rho k_B T K_T$	$\chi_{zz}/\rho\beta\mu^2$	$\rho k_B T K_T$	$\chi_{zz}/\rho\beta\mu^2$
0	0.0574	0.333	0.0573	0.282
0.05	0.0574	0.423	0.0578	0.311
0.10	0.0574	0.574	0.0588	0.322
0.15	0.0576	0.877	0.0607	0.298
