An inadvertent error was introduced in the labeling for the bottom portion (i.e., for normal acetone C_3H_6O) of Fig. 7(a). The PNG region should be cited as occurring between 5 and 20 μs , *not* 10–25 μs . The authors regret not having caught this error. It was found that the measured neutron counts “before” the first collapse are essentially the same (with and without cavitation) for both C_3D_6O and also for C_3H_6O .
