

## Analytical Self-Consistent Field Calculations For Excited Configurations of $\text{Cr}^{3+}$

MIROSLAV SYNEK\* AND GEORGE E. STUNGIS†  
*Department of Physics, DePaul University, Chicago, Illinois*  
 (Received 27 April 1964)

Analytical self-consistent field functions were calculated for several states of  $\text{Cr}^{3+}$ , with two and three open shells of different symmetries. The cusp condition is exactly satisfied. The maximum deviation from the nodal condition for the radial functions  $P_{i\lambda}(r)$  is 0.00010.

### INTRODUCTION

THE atomic self-consistent field (SCF) calculations based on the expansion method<sup>1</sup> were carried out<sup>2</sup> for several states of  $\text{Cr}^{3+}$ , with excited configurations  $3d4s4p$ ,  $3d^24s$ , and  $3d^24p$ . The vector coupling coefficients  $J_{\lambda\mu\nu}$  and  $K_{\lambda\mu\nu}$  were taken from a recent calculation.<sup>3</sup> The computation was done with a program<sup>1</sup> for an IBM-7094 computer.

TABLE I. Calculated energies for states of  $\text{Cr}^{3+}$ .

| Configuration | State   | Calculated total energy | Estimate <sup>a</sup> of correlation energy difference |
|---------------|---------|-------------------------|--|
| $3d4s4p$      | $^2F$   | -1039.9956 <sup>b</sup> | ...  |
|               | $^4P$   | -1040.0844              | ...  |
|               | $^4D$   | -1040.1132              | ...  |
|               | $^4F$   | -1040.1046              | ...  |
| $3d^24s$      | $^2G$   | -1040.8733              | 0.0253   |
|               | $^4P$   | -1040.9090              | ...  |
|               | $^4F$   | -1040.9941              | 0.0079   |
| $3d^24p$      | $^4G$   | -1040.7612              | -0.0045  |
|               | $^3d^3$ | -1041.4762 <sup>c</sup> | 0  |

\* Estimates are based on the experimental values given in Ref. 8. The experimental values for any of the three-open-shell configurations, and for the state  $3d^24s$ ,  $^4P$ , were not available.

<sup>b</sup> The state  $3d4s4p$ ,  $^2F$  is an example of a state degeneracy; its calculated total energy is tentative.

<sup>c</sup> The value of the ground state  $3d^3$ ,  $^4F$  is presented for a comparison (Ref. 6).

\* Assisted through the grant of the guest privileges at the Department of Physics, University of Chicago, Chicago, Illinois, and by the Wright-Patterson Air Force Base, Ohio, under Contract No. AF 33(615)-2027, with the DePaul University.

### RESULTS AND DISCUSSION

The notation, the units, and the terminology used are the usual ones and are identical with those employed in the recent works.<sup>4-6</sup> Some of the important results are presented in Tables I-V.<sup>7</sup>

It is assumed that the results represent the Hartree-Fock values to at least five significant figures for the total energies and to about three decimal places for the radial functions  $P_{i\lambda}(r)$ . Registered deviations from the nodal condition for the functions  $P_{i\lambda}(r)$  did not exceed 0.00010. The cusp condition was identically satisfied so that the wave functions are particularly accurate in the immediate vicinity of the nucleus.

A comparison with experiment<sup>8</sup> is presented in Table I. However, no experimental values were available for  $3d4s4p$  systems of  $\text{Cr}^{3+}$ . Otherwise, the comparison was done in a usual way.<sup>4</sup>

### ACKNOWLEDGMENTS

The authors are indebted to Professor Clemens C. J. Roothaan of the University of Chicago for his support. The authors also appreciate the technical assistance of Carroll Fetter, Fortran Coordinator, of the Wright-Patterson Air Force Base.
