

PHYTOCHEMICAL REPORTS

INTRODUCTION

IN ORDER to try to help authors and readers alike, the Editors have decided to combine all papers dealing with reports of the isolation of previously known compounds and closely related substances (e.g. new glycosides of known aglycones) from new sources into one continuous section with an index. Eventually it is hoped that the data may be presented in tabular form. Contributors wishing to submit papers for inclusion in future issues should try to reduce their contributions to the minimum necessary for adequate presentation. This will ensure rapid publication.

INDEX

Reports are grouped first according to the main Divisions and Classes of the plant kingdom. Within each group, reports are listed alphabetically by family. Only major constituents are given here and new compounds are indicated by an asterisk.

ANGIOSPERMAE

Anacardiaceae	<i>Schinus molle</i>	Lignoceric acid, sitosterol quercetin and unknown sterol
Apocynaceae	<i>Melodinus australis</i>	Betulin and oleanolic acid
Compositae	<i>Parthenium integrifolium</i>	Pyromeconic acid
Euphorbiaceae	<i>Jatropha gossypifolia</i>	Vitexin, isovitexin and apigenin
Labiatae	<i>Monarda citriodora</i>	Tricontane and unknown sterols
Loranthaceae	<i>Phoradendron greggii</i>	Oleanolic acid
Malvaceae	<i>Gossypium hirsutum</i>	a-Bisabolol
